Direct Testimony of George Thurston, Sc.D.

IN THE MATTER

Of the Buckingham Compressor Station

**Supplementary Testimony of
George Thurston Sc.D.**

January 4, 2019

Direct Testimony of George Thurston, Sc.D.

**IMPLICATIONS OF DR. FJORD'S UNION HILL SURVEY TO AIR POLLUTION
HEALTH IMPACTS OF THE BUCKINGHAM COMPRESSOR STATION**

Q. What are the factors that cause a person or a population to be more at risk from air pollution exposure, such as the exposures that will be associated with the proposed Buckingham Compressor Station?

A. As discussed in my original Declaration, September 21, 2018, and in the recent treatise on air pollution health effects by Schraufnagel et al (2018) (to which I am a co-author), both extrinsic (external) and intrinsic (internal) factors determine vulnerability to adverse health effects from exposures to air pollution. The most important extrinsic population factor is the level of exposure to pollution. People of lower social and economic status often have greater exposures to air pollution because they often live in areas of greater traffic density and near point sources of pollution such as power plants and industrial facilities like the proposed natural gas combustion compressor station. Other extrinsic neighborhood factors that contribute to vulnerability include poor housing, the lack of stores to purchase healthy food (e.g., fruits and vegetables that contain antioxidants), violent crime, segregation, lack of green space, and poor access to health care. Intrinsic individual factors that increase vulnerability to air pollution include age (very young and very old), preexisting disease, pregnancy, genetic and epigenetic variation, smoking, and obesity. The concept of cumulative risk combines both the extrinsic and intrinsic factors when attempting to assess the vulnerability of an individual or a population to the ill effects of air pollution.

Q. How do the results of Dr. Fjord's Community Questionnaire relate to the consideration of the human health impacts of the air pollution resulting from operation of the proposed compressor station?

A. Dr. Fjord's report indicates that a number of the above extrinsic and intrinsic factors that increase the adverse effects of air pollution are present in this population. Regarding extrinsic risk factors, as shown in the below figure, a high percentage of the studied Union Hill population live immediately around the proposed facility, most within one mile of the facility, and therefore will receive

the highest pollution exposures from the facility's operation. In addition, though not included in Dr. Fjord's household survey, this is a neighborhood with a very high percentage of residents living in poverty, which is another extrinsic risk factor for environmental health effects. This fact is confirmed by the census information for the neighborhood's Census tract (9301.01) which has a poverty rate of 26.6% (Virginia DEQ, 2018), which is more than double that of the State of Virginia, overall (11%).

In addition, the population living near the proposed facility are shown by Dr. Fjord's results to have multiple individual intrinsic risk factors. For example, as

Direct Testimony of George Thurston, Sc.D.

shown by Table 1 from her report, race by self-identification indicated that minorities, an especially susceptible population, make up 83.5% of residents.

Table 1. Race by self-identification of Surveyed Union Hill Residents

	African American	Native American and African American	White	Native American and White	Native American	Hispanic	Asian
Count	124	27	33	9	3	3	1
%	62	13.5	16.5	4.5	1.5	1.5	.5

Moreover, as shown in Table 2, of Weekday residents, 32% are Children, and 25% Elderly, which are both intrinsic susceptibility risk factors for air pollution exposure.

Table 2. Age Distribution of Surveyed Union Hill Residents

Age Range	0-6	7-18	18-21	22-40	41-65	65+	Unknown	Total
Count	28	36	5	36	43	50	2	200
%	14	18	2.5	18	21.5	25	1	100

Importantly, for the 67 households where Dr. Fjord's research team was able to have extensive questionnaire time, 35 responded with pre-existing medical diagnoses or 59.32% of reached households. This indicates a very high percentage of susceptible people due to their having a pre-existing health condition.

Q. Based on this information what are your Conclusions?

A. The population surrounding the proposed facility location is seen to have multiple susceptibility risk factors, and, as a result, to be especially vulnerable to exposure and susceptible to the adverse health effects of the air pollution from the proposed Buckingham Compressor Station. It is therefore concluded that this especially vulnerable population will suffer especially increased health risks associated with operation of the facility.

Direct Testimony of George Thurston, Sc.D.

Re: Proposed New Source Review Permit for Atlantic Coast Pipeline, LLC to Construct and Operate a Natural Gas Compressor Station (Registration Number: 21599) located at 5297 S James River Hwy, Wingina, Buckingham County, VA 24599

Dear Chairman Langford, Members of the Board, and Director Paylor:

On behalf of Chesapeake Bay Foundation (CBF), please accept the following comments on the proposed permit. These comments are in addition to the written comments CBF submitted to the Air Board on September 21, 2018 and December 1, 2018 and those made orally during the public hearing on November 8, 2018. There, we identified several technical and procedural infirmities in the permit and the permitting process. As discussed below and in the comments of others identified here, several of those deficiencies persist. Thus, we ask the Board to deny the permit.

Summary of Deficiencies in the Permitting Process

1. The decision to approve new terms in the proposed permit without public comment violated the state Administrative Process Act (APA).
2. The Department of Environmental Quality (DEQ) has not provided sufficient information to the Board for it to comply with state law.
3. DEQ did not conduct a proper evaluation of existing data to determine that an Environmental Justice community exists adjacent to the proposed station site.
4. DEQ did not perform a review of Environmental Justice concerns consistent with state or federal law and policy and incorrectly told local residents that such information was irrelevant to the permitting process thereby violating the APA.

5. DEQ failed to adequately consider the health impacts to residents of an Environmental Justice community from operation of the station.

The Board Has Failed to Comply with the Administrative Process Act

On December 19, 2018, the Board held a hearing on this permit; however, the public was not allowed to address the Board. There, DEQ staff identified several changes to the proposed permit developed after the close of the public comment period. Transcript of December 19, 2018, pg. 71-89. Those changes were approved by the Board without the public being able to review the text of those changes. Further, the Board advised the public that it would not permit or accept comments on those changes during this comment period. *Id.* at pg. 91-98. That decision violated the state Administrative Process Act, Code of VA § 2.2-4000, *et seq.*, and can only be remedied by providing the public with access to the new permit terms and with the ability to comment on them prior to a final decision.

DEQ Has Not Provided the Board With Sufficient Information to Comply With State Law

Section 10.1-1307(E) of the Virginia Code provides that the Board must consider facts and circumstances relevant to the reasonableness of operation of a 54,000 hp gas compressor station in a rural, low economic, and minority community including:

1. The character and degree of injury to, or interference with, safety, health, or the reasonable use of property which is caused or threatened to be caused;
2. The social and economic value of the activity involved; and
3. The suitability of the activity to the area in which it is located....

Id.

DEQ has not addressed each of these requirements in its presentations to the Board and the public.

While there has been some information provided on the character and degree of injury possible should there be an explosion or other catastrophic event at the station, no information has been provided with respect to how operation of the station will interfere with the reasonable use of neighboring properties and their diminution in value. See Comments of Mary Finley-Brook. The adjacent property owners have inquired about these issues but their concerns, which must be considered by the Board, have not been addressed.

Moreover, DEQ has provided no information about the increased risk of operating two major pipeline systems (Atlantic Coast and Transco) and a large compressor station within yards of people's homes. No one has discussed whether it is suitable to saddle a minority community living at or below the poverty level with two pipeline systems and a mega compressor station. Nor has DEQ provided any information about the compound

environmental and habitat degradation caused by these three mega natural gas facilities that now crisscross the county in Union Hill.

Because this information has not been provided, the Board cannot comply with its statutory and Constitutional obligations. Virginia Constitution, Article XI, Section 1; VA. Code Ann. §§ 10.1-1307(E); 67-102 (A)(11).¹

DEQ Failed to Identify the Community Surrounding the Compressor Station as an Environmental Justice Community

As noted above, the Board must consider the suitability of operating the compressor station in Union Hill. Part of that analysis is determining whether siting the station there will affect an Environmental Justice community. As explained in the prior oral and written comments of Dr. Lakshmi Fjord and the letter to the Board from the Southern Environmental Law Center on December 7, 2018, there is undoubtedly an Environmental Justice community of people living within close proximity of the proposed compressor station site. Despite that evidence, and the fact that FERC had identified the community as impoverished, DEQ persisted in representing to the Board that the surrounding community was not an Environmental Justice community. The January 4, 2019 comment letters of Stephen Metts of the New School, Thomas Burkett of VCU, Mary Finley-Brook of the University of Richmond, and Dr. Lakshmi Fjord confirm that DEQ's representation is erroneous and that the Union Hill community is an Environmental Justice community both because most of the people living there are minorities, but they are also living at or below the poverty line.

As explained in his January 4, 2019 report, Mr. Metts of the New School took Dr. Fjord's detailed door-to-door household information and located the residences she and her staff visited on a map. Attachment A. He then determined the spatial distance of those residences from the proposed compressor station. See the concentric rings of 1, 2 and 3 miles. Further visual representations of those homes have been performed by Mr. Burkett. Attachment B, pages 1-4.

Mr. Metts thoroughly explains why DEQ's reliance on EPA's EJSCREEN and FERC's EJ analysis is flawed. Dr. Fjord's explanation of the data she has collected confirms the location of homes near the proposed compressor station, the race and economic level of the people living in those homes. Combined, those analyses establish there is significant residential density within .5 mile and 1 mile from the facility and the residents living there are mostly minorities, both ethnic and economic.

Neither Dominion nor DEQ have undertaken such a thorough analysis. Thus, DEQ's representation to the Board that there is no Environmental Justice community near

¹ With respect to the Air Board's ability to require a site suitability analysis *see, Mirant Potomac River, LLC v State Air Pollution Control Bd.*, 75 Va. Cir. 117, 2008 Va. Cir. LEXIS 220 (Richmond Cir. Ct. March 13, 2008); Virginia State Air Pollution Control Board proceedings on the Virginia Hybrid Energy Center permitting, January 25, 2008.

the proposed station must be ignored. The Board must now consider whether DEQ has complied with state and federal Environmental Justice laws and policies in the permitting process.

The Permitting Process Has Not Complied With State Environmental Justice Policies

During these proceedings, much has been said and written by DEQ about what the phrase “environmental justice” means. Unfortunately, much of it is incorrect.²

An executive order issued by Governor McAuliffe in 2017 follows the environmental justice policy developed by the United States Environmental Protection Agency in response to a Presidential Executive Order issued in 1994. That policy provides for “the **fair treatment** and meaningful involvement of all people regardless of race, color, faith, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.”

Governor Northam has recognized the validity of those concerns. In Executive Order Six (2018), he acknowledged the critical role the Department of Environmental Quality (DEQ), and hence this Board, play in protecting Virginia’s air, water, and public health. He specifically noted that “many Virginians, particularly those in ... **rural low income or minority communities**, do not enjoy clean air and water for outdoor recreation and daily activities.” Governor Northam acknowledged that “many Virginian’s suffer from asthma attacks and other respiratory ailments that are directly attributable to poor air quality.” He directed DEQ to undertake a review of its programs to ensure “that DEQ’s permitting programs are **as protective** of public health and the environment as authorized **under state and/or federal law**....” DEQ was also directed to assess “the enforceability of permitting activity and determining if changes are needed in the methods DEQ uses in crafting such permits.”

Moreover, the Commonwealth Energy Policy, VA. Code Ann. § 67-102 (A)(11), provides that state agencies such as the Board must “[e]nsure that development of new, or expansion of existing, energy resources or facilities does not have a disproportionate impact on economically disadvantaged or minority communities.” As explained in the comments of Mary Finley-Brook, Dr. Lakshmi Fjord and Stephen Metts, January 4, 2019, citing the compressor station in Union Hill will have a disproportionate impact on an economically disadvantaged and minority community.

Environmental justice policies have been enacted by the federal government and states because oftentimes decisions about pollution permits and where industrial facilities should be located were based upon who lived nearby; often minority, economic and ethnic, communities. In fact, the genesis of the movement is identified with a decision to

² CBF incorporates by reference its comments made to the Air Board in CBF’s comment letter of September 21, 2018.

site a hazardous waste landfill in a majority African American county in North Carolina; a place where the residents were not highly educated and lacked economic, legal and political resources necessary to protect their rights.³

Here, DEQ has argued that because the air pollution permit meets national air pollution standards and is as stringent as other similar permits then it satisfies environmental justice concerns. Those arguments miss the mark. They do not consider the essential question of whether issuance of the permit fairly treats people affected by the facility.

“Fair treatment” means that no matter who you are, the government cannot approve a permit without considering whether that decision treats **everyone** fairly. Merriam-Webster defines “fair” as “marked by impartiality and honesty: free from self-interest, prejudice or favoritism.” While what is “fair” treatment can be subjective, at its bare minimum, it means being treated as you would treat others; that is, the Golden Rule. It is in this context that the Board must review the air pollution permit.

The Board must consider the fairness of decreasing the value of local properties compared to others in the county when it decides whether to allow an industrial facility next to homes. It must consider whether it is fair to expose neighboring residents to the risk of death when it reviews a permit to allow the release of highly flammable gas 35 times a year. It must consider the fairness of harming the lungs of neighbors to a gas burning plant when those across the state will not be exposed to the same level of pollution. *See* Declarations of Dr. George Thurston and comments of Suzanne Keller.

In sum, would the members of the Air Board accept the safety risks and financial loss associated with the compressor station especially after the State Corporation Commission has found that there might not be an objective demonstration of need for the Atlantic Coast Pipeline project? If the answer to either of these questions is no, then the decision should be to deny the permit. That is fair treatment. That is environmental justice.

In addition, the Board must also determine whether DEQ has followed state and federal Environmental Justice policies concerning an EJ community’s ability to engage in the permitting process. All of these policies are geared toward early identification of and engagement with members of such communities in the permitting process. Here, members of the Union Hill community, an established Environmental Justice community, have been repeatedly told by DEQ staff that their cultural heritage concerns are not relevant in this proceeding. Despite years of asking for DEQ engagement, agency staff did not meet with any members of the community until August 2018, three years after the initial air permit application by Dominion. During that meeting, DEQ staff repeatedly told attendees that information concerning cultural resources or historical sites relative to the minority population such as slave burial sites, see January 4, 2019 comments of

³ <https://www.energy.gov/lm/services/environmental-justice/environmental-justice-history>

Richard Walker, were not relevant to the permitting process.⁴ See Comments of Mary Finley-Brook, January 4, 2019. This is in direct contravention of state law and policy.

Thus, as explained in our prior comments and the comments of Mary Finley-Brook and Dr. Lakshmi Fjord referenced here, permitting the compressor station in Union Hill will violate both Executive Orders, the Commonwealth Energy Policy, and accepted precepts of Environmental Justice.⁵

DEQ Failed to Adequately Consider the Increased Health Impacts Local Residents Will Suffer From Operation of the Compressor Station

CBF noted in its earlier comments that air pollution from the compressor station will have an adverse impact on the environment and human health. Based upon the data accumulated by Dr. Fjord and state population statistics, people living near the compressor station will be disproportionately harmed by the station's emissions.

As explained in Dr. George Thurston's expert report, Exhibit E to our September 21, 2018 comments, fine particulate matter (PM2.5) generated by fossil fuel combustion will have an adverse impact on human health in the Union Hill community, Buckingham County, Virginia, and the region. Dr. Thurston stated that any increase in air pollution will increase the risk of adverse effects, even when the National Ambient Air Quality Standards are not violated. *Id.* at 13-17. Dr. Thurston noted that neither Dominion nor DEQ have evaluated the increased risk of harm associated with fine particles in conjunction with acidic gases like those that will be emitted by the station. *Id.* at 18-21. Dr. Thurston specifically disagrees with DEQ's conclusion that "in no case, will ... emissions cause air quality to exceed regulatory standards, which are protective of human health and the environment." *Id.* at 21-22.

In addition, based on the door-to-door investigation of Dr. Fjord, see her comment letter of January 4, 2019, approximately 39% of the people living next to the proposed station already suffer health related ailments. Attachment C. Dr. Thurston has evaluated that data and determined that because the residents of Union Hill are economically disadvantaged and so many individuals suffer pre-existing ailments, they can be expected to suffer disproportionately from air pollution emitted by the compressor station. Thurston Supplemental Declaration. Attachment D. Because those residents of Union Hill are members of an Environmental Justice community, state and federal law protect them from such disproportionate treatment by governmental permitting decisions. Thus, based on this fact alone, the Board should deny the air permit.

⁴ It is noteworthy that Justin Sarafin of Preservation Virginia has submitted a comment letter noting the potential cultural and historic significance of the proposed compressor station site and asking the Board to defer action on the permit until those concerns can be thoroughly evaluated. Letter of January 4, 2019.

⁵ See DEQ's definition of Environmental Justice.

<https://www.deq.virginia.gov/Resources/Glossary/GlossaryE.aspx>

Conclusion

DEQ has not complied with state law concerning an appropriate site suitability analysis. Moreover, DEQ failed to properly identify the Union Hill community as an Environmental Justice community and, hence, has failed to properly engage that community in the permitting process, discounted their concerns and proposed to expose them to disproportionate health risks. For all these reasons, the Air Board must deny the proposed permit.

Sincerely,

Jon A. Mueller
Vice President for Litigation

Proposed Compressor Station/Buckingham Community Resident

1 message

JOSEPH <joescruggs53@centurylink.net>
To: airdivision1@deq.virginia.gov

Fri, Jan 4, 2019 at 1:23 PM

My name is Joseph Scruggs and I am a life long resident of Buckingham County. While I do not live within the Union Hill community I feel that as a retired educator, and former member of the Board of Supervisors, I have a great knowledge of the make up of the communities within the county. Much has been said that the Union Hill community is historic and a majority of the residents are African American. Based on my knowledge of the county and the last census this is a misleading view of the community. This community is not composed to a majority of African Americans, and it is no more historic in then any other area of the county. As a matter of fact there are other areas in the county, such as the Third Liberty community, that was the birth site of Dr. Carter G. Woodson, that holds a greater historic value to the African American community then Union Hill.

I am in full support of the compressor station and do not see it as dividing or destroying an African American community. The air of division comes not from the community, but from those outside the community, who up until this time have shown little of no interest in this community. Their efforts in bringing about confusion and putting out misleading information is totally self serving. This is a diverse community, but it includes more Whites then African Americans who live close to the proposed compressor site.

With that being said, as a African American resident of the county, I do not see the location of the compressor station as an undue burden on the African American community.

Virginia Clinicians for Climate Action Statement on Proposed Buckingham County Compressor Station:

As clinicians we know that our patients cannot be healthy if the air, water and soil are contaminated with pollutants. The Buckingham County Compressor Station draft permit and air modeling report do not assess or comprehensively consider inevitable health impacts. It fails to adequately protect vulnerable at risk populations who reside near the proposed compressor and across the state. It should therefore be denied.

The majority of the population surrounding the proposed compressor station is African American and includes both the elderly and children who are more vulnerable to air pollutants, especially particulate matter. We do not know the specific health status of nearby residents, as a comprehensive health impact assessment is not part of the regulatory process.

The American Lung Association does report that of the 17,048 residents of Buckingham County there are 255 children and 1,190 adults with asthma, 896 people with COPD, and 1,237 patients with cardiovascular disease. Along with the greater than 3,000 children and 3,000 adults over 65, these populations are all at risk from air pollutants.

The air modeling report conducted concludes that health will be protected because the levels of the modeled pollutants do not exceed the National Ambient Air Quality Standards (NAAQS). However, the closest air monitoring station to the proposed compressor station is approximately 62 miles away. When considering health impacts, applying regional air quality standards will not be sensitive enough to assess the risks to people who reside within a mile or two of the compressor station.

The permit will allow 190.3 tons of air pollutant emissions in this vulnerable neighborhood. Other hazardous air pollutants and toxics will also be emitted from the compressor station, but are not described in the permit, as they do not rise to the level regulated in Virginia statutes. We know that exposure to air pollution leads to excess asthma events, excess respiratory and cardiovascular disease and diminished quality of life.

Concern has also been raised about whether the ambient air standards are sufficient to address risks due to the episodic release of pollutants. People in close proximity to compressor stations are exposed to episodic shutdowns, blow downs, and fugitive emissions. Ambient air monitoring does not capture the intensity, duration, and frequency of these episodic exposures. The residents of Union Hill are at increased risk to these exposures and should be protected.

In addition to NAAQS pollutants, the Federal Energy Regulatory Commission's Final Environmental Impact Statement on the Atlantic Coast Pipeline states that this one pipeline would emit 30 million tons of Carbon pollution, more than doubling Dominion Energy's current carbon emissions. Academic centers across Virginia are studying how warming temperatures are affecting the health of families and communities in the Commonwealth. Clinicians are treating children, parents and grandparents for rising heat illness, worsening water quality and sky-rocketing tick-borne infections. Increasing emissions of heat-trapping Carbon Dioxide is a mistake that we simply cannot afford to make.

Virginia Clinicians for Climate Action asks the Air Board to consider the health and safety of the residents of Union Hill and across the Commonwealth. The safety and health of Virginians should guide your consideration of the air permit. Given the known harms to residents of Buckingham County and across Virginia, we recommend denying the permit.

comment on the air permit for the Buckingham Compressor Station

Cc: DEQPublicInfo@deq.virginia.gov

I am commenting to urge the Air Board to deny the air permit for the Buckingham Compressor Station. The Department of Environmental Quality's recommendations for approval of the air permit are based on false data and improper analysis.

Atlantic Coast Pipeline's [Buckingham Compressor Station Environmental Justice Review](#) from November 2018 uses invalid census data in its analysis of the impacted population. The only valid assessment of the impacted population in the legal record is the [Union Hill Community Household Study Site and Methods Report](#) done by Dr. Lakshmi Fjord. If the air permit is approved based on the ACP's Environmental Justice Review and not on the correct data from the Union Hill Household Study done by Dr. Fjord, the approval could be considered nothing less than invalid and unjust.

Further, the December 7, 2018 [letter from the Southern Environmental Law Center](#) details how the Department of Environmental Quality (DEQ) did not perform a proper site suitability analysis, as is required by law. The DEQ's failure to perform a proper site suitability analysis is therefore a violation of the law and must result in a denial of the draft permit.

The Air Board must deny the air permit for the Buckingham Compressor Station.

Sincerely,

Stacy Lovelace

Air Division 1, rr <airdivision1@deq.virginia.gov>

Vote NO on the proposed compressor station in Union Hill

Chairman Richard D. Langford & Members of the Air Pollution Control Board
c/o Office of Regulatory Affairs
Department of Environmental Quality
P.O. Box 1105
Richmond, Virginia 23218

Dear Chairman Langford and Members of the Air Pollution Control Board:

Thank you for this opportunity to submit comments to the Board concerning the site suitability of the proposed compressor station in Union Hill. As you are aware, Dominion Energy has sought to build this massive fracked gas/methane fueled compressor station in the historic community of Union Hill, [a predominantly African American community founded by Freedmen in Buckingham County, Virginia after the Civil War](#), as part of its \$7 billion 600-mile Atlantic Coast Pipeline.

As detailed below, placement of a massive 54,000 horsepower compressor station powered by the burning of "natural gas" is improper for a variety of reasons, but most especially because a) this is an environmental justice community that is 83% persons of color, most of whom are African American and b) because of that fact, they are at higher risk of suffering ill health effects from this project.

By way of introduction, I have been a practicing attorney for more 35 years. I spent 21 of those years as a Senior Counsel with the United Mine Workers of American Health and Retirement Funds, where I worked full time on health and other issues faced by retired coal miners in Virginia, West Virginia, Kentucky and other coal producing areas. I am intimately aware of the health effect that extractive industries have on the workers who work in those jobs and the people who live near such facilities. This includes coal mines, coal processing plants, fracking fields and all manner of industrial facilities that burn fossil fuels. The proposed compressor station in Union Hill is one such facility.

I also am familiar with a history of more than 100 years of rural areas in Appalachia being treated as sacrifice zones, which is exactly what is being offered to the good people of Union Hill.

I attended the Board's meetings on November 8-9 and listened in amazement as DEQ's Michael Dowd presented what to most practicing attorneys was an absurd interpretation of this Board's power to consider site suitability with regard to the Union Hill compressor project. Mr. Dowd told this Board that it should not consider site suitability because the Buckingham County Board of Supervisors already has done so under a section of the Virginia Code dealing with zoning. The claim is absurd on its face.

Virginia Code 10.1-1307 clearly states that the Board "**shall consider**" a variety of factors including "the suitability of the activity to the area in which it is located." (emphasis added). Then Board member Samuel Bleicher, a Harvard educated attorney, directly challenged Mr. Dowd's claim and I believe that is one of several reasons he was abruptly dismissed by Governor Northam. Mr. Bleicher was correct. I infer from this Board's decision on December 19 to reopen the public comment period that the Board likewise now believes that one of its most important roles is to determine whether Union Hill is a suitable site for this project. That is all to the good.

Any fair consideration of this matter leads to the inescapable conclusion that Union Hill is an environmental justice community based on race. The record in this matter includes a door by door analysis of the people who live closest to the proposed compressor station site. The "Union Hill Community Household Study Site and Methods Report" was authored by Dr. Lakshmi Fjord, Ph.D. of the Department of Anthropology, University of Virginia. That study shows definitely that Union Hill is 83% persons of color and predominantly African American. The study surveyed 99 households, comprised of 199 residents, within 1.1 miles of the compressor site. It found that 83% of those were people of color. This included 62 % African American and an additional 14% mixed African American and Native American. 2% are Native American and 5% are mixed Native American and White. Only fewer than 17% are white.

On December 19, DEQ representatives conceded that if these numbers are correct, then Union Hill is in fact an environmental justice community based on race. Yet they have done nothing to question the results of that study. Instead, they point to a EPA tool known as the EJSCREEN which, according to the EPA, is not only not definitive, but actually considered unreliable when it comes to small populations. The EPA in fact has an entire webpage devoted to the limitations of that tool. Dr. Fjord's analysis is a textbook example of why a community based study of the actual people who live in a small rural community is more reliable than any census or algorithm based estimate.

Viewed more simply, if Dominion Energy thought Dr. Fjord's numbers were inaccurate, it surely would have spent the money to do its own study. Knocking on 99 doors is done by the average political volunteer in a day or two. This endeavor is a little more involved but not by much. Dominion has not done the work because it knows what the results would be. Anyone who knows Union Hill knows the truth.

It is my belief that DEQ is attempting to mislead this Board by trying to distract from the empirical proof presented by the door to door study. It is similar to Mr. Dowd's attempt to present a false interpretation of this Board's own duties, as discussed above. The Board should reject that approach and recognize, as it must, that this historic African American community founded by freed slaves is exactly what it appears to be, namely a vulnerable environmental justice community.

Likewise, it is beyond question that the permitting process in this matter should not go forward until the Virginia Department of Health or other qualified professionals conduct a comprehensive health assessment of the 199 or so persons who live in closest proximity to the proposed site.

In this regard, I am deeply troubled by what appears to have been a deliberate effort by DEQ Director David Paylor to mislead this Board concerning his dealings with the Virginia Department of Health.

For more than four years, opponents of this project have noted the indisputable fact that the compressor station would spew a variety of toxins into the air and water, and that these would disproportionately affect African Americans, who experience a higher level of respiratory conditions such as asthma, than the population at large.

Opponents have demanded that the Commonwealth of Virginia be required to perform a health assessment of the several hundred residents of Union Hill to get a baseline of their health status. They point to the door to door study done by Dr. Fjord, which revealed that 59% of Union Hill residents have a pre-existing medical condition, including asthma, allergies, multiple sclerosis, lupus, COPD, chronic bronchitis and pneumonia, congestive heart disease, heart disease and diabetes.

This is precisely why the [Governor's own Advisory Council on Environmental Justice](#) and the [Virginia State Conference of the NAACP](#) have called for a qualitative risk assessment and a Health Impact Assessment before Virginia even considers this proposed project. To date, their pleas have landed on deaf ears.

At the Board's December 19 meeting Mr. Paylor was asked whether Virginia could do a health assessment of the potential impact of the compressor station on the residents of Union Hill. He responded by saying that such a study could be done – but that it could not happen until after the compressor station was in operation for several years.

That struck the people who were present as odd in the extreme. It's like telling a smoker to smoke for two years before we can determine if it will affect your health.

But in [a just released email that was sent to Mr. Paylor on December 6](#), Dr. Caroline Holsinger, Director of the Virginia Department of Health's Division of Environmental Epidemiology, said that she had conferred with the State Toxicologist and that he "did indicate that we could do a health assessment on projected data."

The email said nothing about being unable to do the study until after the compressor station was built. And it said nothing about having to wait two years.

Instead, Dr. Holsinger said that the Department of Health “can conduct a health assessment” and that in order “to initiate a health assessment, we would need some data” either from DEQ or from Dominion. The department could then follow up later and compare the projected data with data gathered after operations began. She noted that the kind of data they would need would include “any special populations to consider (children, elderly, those with compromised health),” as well as “peak exposure” that was “expected to occur,” together with the name and concentrations of each chemical emitted and other data.

Dr. Holsinger also said “we would be happy to reach out to the best points of contacts to further discuss potential data” and she copied the state’s Deputy Commissioner for Population Health and State Epidemiologist and the Deputy Commissioner for Governmental and Regulatory Affairs “for their awareness.”

Almost one month later, it appears that Mr. Paylor did nothing to let Dr. Holsinger know who the “best points of contacts” might be so that the health department could initiate its study.

David Paylor disclosed none of this to the Air Board on December 19. He did not reveal that the health department could commence a health assessment now, based on demographic information and projected emissions data. He did not stress that the top officials of the health department had been advised of this situation and that the department was “happy to reach out to the best points of contacts” now – not at some undefined time in the future, to start collecting data. And he did not tell the Air Board on December 19 that thirteen days earlier, on December 6, the health department had offered to commence a health assessment now. And that he had done nothing to help them get started.

Instead, Mr. Paylor made it sound like it was impossible to get any useful health information until after the compressor station is in operation, until after the air permit is approved.

The failure to insist on a health impact study for this environmental justice community is not only wrong but will come back to haunt each and every person who is involved in this process. Union Hill and its residents, not to mention their ancestors, have survived all manner of atrocities over the years. With all due respect, this Board should not compound that sad history. At a very minimum, any vote on this project should be delayed until a proper health study has been done of this community.

For the reasons set forth above, I urge this Board to vote no on the proposed air permit for a compressor station in Union Hill.

Sincerely,

Jonathan Sokolow, Esq.

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Sincerely,

Joseph Carrier

Members of the Board;

While I am admittedly not qualified to comment on the application by ACP, LLC for an air quality permit for its Buckingham Compressor Station on technical grounds, I nonetheless would like to take this opportunity to express some thoughts on this issue that I believe to be relevant on what is perhaps a more fundamental level.

There has recently been much discussion regarding whether or not the Union Hill community qualifies as a minority environmental population, and, while in light of the recent detailed study conducted by Dr. Lakshmi Fjord, it appears obvious that the census data on which the community's disqualification is at the very least out-of-date and therefore likely to be inaccurate, I would instead like to call attention to the fact that this particular issue may possibly be a red herring, or at least not essential to either the analysis or your final decision.

In its discussion of environmental justice issues associated with the Buckingham Compressor Station (Compressor Station 2), the Final Environmental Impact Statement (FEIS) for the Atlantic Coast Pipeline states in **Sec. 4.9.9.1, (p.4-514)** that;

*"When considering the health impacts associated with compressor station emissions, increased rates of lung cancer were identified associated with the compounds emitted by compressor station operations (Nafstad et al., 2003). Studies have shown that several different cancer-related compounds and chemicals are present in the air in proximity to construction and operation of compressor stations, and that some of these have **documented health effects on the general and vulnerable populations** (Southwest Pennsylvania Environmental Health Project, 2015)."*
(Emphasis mine.)

And while it goes on to state that;

"...African American populations have a greater prevalence of asthma. Thus, it is reasonable to assume that, where African American populations exceed the thresholds for environmental justice

populations identified in this analysis, those populations have an increased risk over Caucasian populations (and therefore disproportionate) of experiencing adverse effects from decreased air quality.”

It also proceeds to state that;

*“...it is recognized that **low income populations** have greater risks associated with negative health outcomes (CDC, 2017).”* (Again, emphasis mine.)

Additionally, moving ahead to **Sec. 5.1.9 of Conclusions and Recommendations**, we find on **p.5-30** that while;

“None of the three census tracts within 1 mile of the proposed Compressor Station 2 are designated minority environmental justice populations,”

We determined that Compressor Station 2 would be within a census tract that is designated a low-income environmental justice population. The two other census tracts within 1 mile of the proposed Compressor Station 2 are also designated low-income environmental justice populations.”

Thus, while African American populations perhaps are at higher risk of negative health effects from “decreased air quality” than Caucasian populations due to higher instances of asthma, the low income populations existing around the compressor station site, whether they be African American or Caucasian, are nonetheless vulnerable and at greater risk of experiencing adverse health effects, including lung cancer.

With this in mind, the outstanding issues would seem to have to do with how the level of impact risk may be quantified and how it may relate to the issue of justice. The FEIS concludes;

“Impacts from compressor station emissions would be moderate because, while they would be permanent facilities, air emissions would not exceed regulatory permittable [sic] levels. As a result, no disproportionately high and adverse impacts on environmental justice populations as a result of air quality impacts, including impacts associated with the proposed Compressor Station 2, would be expected as a result of ACP and SHP.” (p. 5-31)

Even if we were to acknowledge that “air emissions would not exceed regulatory permittable levels”, which is, in itself, an unsupported claim, how exactly does that justify classification of the impact level as “moderate”, and furthermore, how does a “moderate” impact level equate to “no disproportionately high and adverse impacts on environmental justice populations”? What is the definition of “moderate”? What does “disproportionally high and adverse” mean? . Somehow, through a sort of verbal slight-of-hand, we are being asked to accept the use of one undefined term by basing it on another. To maintain that a particular impact is “moderate” and not

“disproportionally high and adverse”, without defining the terms or presenting any information to justify the claim is, in fact, nothing other than an assumption, and one that partakes of the very sort of “arbitrary and capricious” behavior that has recently been called out by the courts with regard to the other agency permits that are required in order for the project to proceed. Even if we were to accept the notion that there might be, in fact, some way to correlate a particular level of health impact (or risk) with the “justness” of imposing that risk on a particular population, how exactly do we get from a “moderate” risk to “**no disproportionately** high and adverse impacts”? Or does the use of the qualifying term ‘disproportionally’ in this context perhaps imply that a “moderate” level of risk somehow correlates with something like a “moderate” level of justice; and if so, what does such a term really mean?

The real problem here seems come down to the recognition that justice (like “truth”, with which it is frequently associated) is a concept that is essentially non-provisional, i.e. it does not admit any qualification or degree. It does not partake of shades of grey. Something is simply either just, or it is not, and debating the point at which imposing a greater risk of adverse health effects on vulnerable populations may be justifiable becomes moot.

In short, if it has been “....*determined that Compressor Station 2 would be within a census tract that is designated a low-income environmental justice population*”, and “....*it is recognized that low income populations have greater risks associated with negative health outcomes*”, then there simply are real environmental justice issues associated with the site that cannot be disguised regardless of which levels of impact or degrees of risk may be employed. That being the case, I respectfully urge you to act in the name of true, non-provisional justice by rejecting the application for an air quality permit for this project.

Respectfully submitted,

James Bolton

Re: Buckingham Compressor Station

To Whom it May Concern:

Since 2015, Preservation Virginia has been an advocate for the proper identification and review of archaeological, cultural, and historic resources potentially impacted by the Atlantic Coast Pipeline (ACP); we have been especially concerned about resources located in Buckingham County such as the Union Hill community located near the ACP's proposed compressor station. We maintain our long-held view that the significance of this rural African American community has yet to be fully recognized, and that the imposition of the ACP compressor station here—and the resulting disproportionate loss of integrity and adverse impact on the residents—amounts to a present-day example of environmental injustice.

On Preservation Virginia's May 2016 annual list of Virginia's Most Endangered Historic Places, we included the Union Hill area as a specific example of "natural, historic, and cultural resources threatened by utility infrastructure projects." Since then, we have advocated at county, state, and federal levels of review that Union Hill be considered significant, not as a traditional collection of singular historic sites or structures, but as a rural historic landscape, defined as a geographical area that has been used or shaped by human activity and that possesses a significant concentration of land use, vegetation, buildings and structures, roads and waterways, and natural features. Rural historic districts represent areas where the environment and people have inextricably influenced and shaped the character of the area over a long period of time. Post-Emancipation landscapes like Union Hill, where most structures no longer stand above ground, and in this case, where the documentary record has been largely erased as a result of its status as a "burned" county, are even more important candidates for research and preservation.

In making its decision on the permit in this case, the Board is required to consider "[t]he suitability of the activity [the compressor station] to the area in which it is located," Va. Code 10.1-1307.E.3. In our view, the area proposed for the compressor station is not suitable, because of its historic and cultural significance, which has not yet been fully evaluated or recognized. We have submitted initial information to the Virginia Department of Historic Resources to support the National Register-eligibility of the Union Hill area, and we received specific recommendations for additional research and

information that needs to be compiled in order for the evaluation to move forward. However, that evaluation process has not yet been completed. It is important to ensure that the Board makes an *informed* decision about whether the Union Hill area is a suitable location for the compressor station, and until the issue of National Register-eligibility is thoroughly evaluated and resolved, that permit decision would be inherently uninformed, under one of the Board's mandatory criteria.

Accordingly, we respectfully request that a final permitting decision regarding air quality concerns be deferred or delayed until the Buckingham Compressor Station siting area can be properly evaluated for National Register of Historic Places eligibility, and issues of potential environmental injustice can be addressed and rectified.

Sincerely,

Justin A. Sarafin
Director of Preservation Initiatives and Engagement

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Sincerely,

Jim Schaberl

To: airdivision1@deq.virginia.gov

Fri, Jan 4, 2019 at 6:12 AM

Dear Virginia Air Pollution Control Board,

This really does deserve further review at the very least.

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil.  **AIRBOARD.docx**
20K

airdivision1@deq.virginia.gov

RE: Buckingham Compressor Station

As a former Inland Wetlands Commission in my Connecticut town, I know that environmental permitting always includes weighing the value and necessity of a particular project against the destruction it will cause and the measure of its risk. In addition to the air pollution, noise and environmental justice issues raised by this pipeline, there are market-based reasons the decision to build this \$7 billion pipeline is no longer a good decision, worth the risks and destruction it will bring, including the risk to Union Hill, where the health effects of pipeline maintenance to air quality will be particularly harmful to this historic community.

FERC is currently reexamining their acceptance of affiliated contracts to demonstrate 'need'. These contracts are easily canceled and represent reservations of space, not a future contract for the gas itself. Virginia's need for the gas to be transported by the ACP can be met with current pipelines and will be less expensive than ACP gas.

Here is a list stating that "this gas is no longer a good choice" for Virginia's electricity system.

- **OVERESTIMATED REALITY OF THE FRACKED GAS SUPPLY ...**

The recoverable gas may not last. Producing gas from shale is very different from conventional wells. Pipelines are built to last 40-50 years, but the output of shale wells declines by 70-90% in the first three years of operation. EIA projections have been called "extremely aggressive" and very unlikely to be realized." EIA estimates equal 3 times the U.S. Geological Survey's (USGS) mean estimate of recoverable resources. (1)

- **ENVIRONMENTAL PROBLEMS RAISED BY FRACKING ITSELF ...**

including excessive water use and the earthquake problem created by the pressurized reinjection of toxic waste water underground ...

- **THE ENVIRONMENTAL DESTRUCTION AND INJUSTICE THAT WILL OCCUR**
building this pipeline including the use of eminent domain to find a 600 mile route for the pipeline ... especially if the gas will be exported. Exported gas is not a community based reason to take property from unwilling owners. The ACP expects to file lawsuits against more than 100 landowners who have refused to give permission to survey.

- **THE NECESSITY TO STOP CLIMATE CHANGE AND RISING SEA LEVELS ...**
Methane is 85 times more potent than CO₂ while it is in our atmosphere, and Climate Change will be expensive as well as deadly. Norfolk has over \$1 billion of proposed projects to protect against flooding by 2035. Virginia Beach has allocated \$450 million for storm-water projects in the next 5 years. Hampton Roads has allocated \$240 million toward projects to protect sewage systems from flooding. Hampton Roads Sewage District in Virginia has initiated a \$25 million pilot project to inject water underground to slow land sinkage. (2)

Other state planning Louisiana has allocated \$25 billion for risk reduction in their coastal master plan. The Texas Gulf Coast has an \$11.6 billion storm surge protection plan. New York City has a \$3.7 billion coastal protection plan for the next 10 years.

- **REDUCTION IN DEMAND FOR GAS TO REPLACE COAL GENERATION**
Two gas plants submitted by Dominion's affiliated company to demonstrate the need for the ACP have been canceled. Neither plant had been approved, or even submitted for approval. In place of those two plants Dominion now plans to build a different type of natural gas plant. Called 'peakers' these newly proposed gas plants are designed to support the promised 5000MWs of solar when clouds block the sun but ...

- **THERE ARE MANY ALTERNATIVES TO MEET OUR PEAK ELECTRICITY DEMAND MORE ECONOMICALLY...**

Predictions say "within a few years 'peaker' plants and storage will be competing head to head and by the mid 2020's storage always wins." (3)

In addition to storage, which is now cost effective out west, demand can be reduced with efficient buildings and with demand response programs. Virginia is at the bottom of the list for incentivizing efficient buildings according to ACORE.

- **THE ENORMOUS RESOURCE OFFSHORE WIND CAN SUPPLY ...**

Offshore wind is another 'peaker' alternative ... Virginia's rooftop solar combined with our extraordinary offshore wind resource can meet all of our summer peak demand. A full build out of our offshore wind could produce 3+ times Dominion's 2017 net energy load.

- **ECONOMIC VALUE OF REDUCING OUR ENERGY USE**

With the availability of reasonable capital investment loans for building efficiency retrofits, the reduced demand of efficient buildings can replace all the nuclear generation currently used by Dominion as described by Tom Hadwin. The money saved, formerly building expense, now becomes available for other uses from day 1. (See Arlington PACE program)

Those are the reasons we do not need or want this pipeline. The only rationale for its construction would appear to be the outdated federally assigned 14% profit, along with the construction costs, Virginia customers will have to pay for the space their utility, another subsidiary of Dominion, reserved on the pipeline whether they use the gas or not.

Deny the air permit. There are no benefits for Virginia if it is built, only damages and risks.

Thank you

Compressor station placement in Back Neighborhood

Jennie Waering <jwaering1102@gmail.com>

Fri, Jan 4, 2019 at 12:22 PM

To: "airdivision1@deq.virginia.gov" <airdivision1@deq.virginia.gov>

Dear VA DEQ,

I am writing to say that I am standing with the people of Union Hill, the historic Black community in Buckingham County, Virginia, against the massive, polluting, dangerous fracked gas compressor station Dominion Energy has proposed as part of the Atlantic Coast Pipeline.

The compressor station would be a 54,000-horsepower industrial facility pumping fracked gas through the Atlantic Coast Pipeline. The facility would have serious negative effects on air quality, health, and quality of life for those who live near it- a community without the resources to protect itself or to leave their roots.

The compressor station would run non-stop every day of the year, in close proximity to residents who vehemently oppose the threat of toxic air pollution, dangerous explosions and disruptive noise pollution.

I encourage you to use your authority to halt construction of this compressor for the sake of the people of this community. Placement here is environmental injustice.

My name is Frank Ronnau and I am a resident of Powhatan County. I have been following the proposed pipeline and the compressor station that will affect on our neighboring communities.

I have been reading documentation filed and in the local papers.

I am asking you to deny the air permit on the environmental injustices that will occur to Union Hill and all communities in the path of the ACP.

Respectfully,
Frank Ronnau

Dear appointed air committee members and to DEQ Director Paylor,
I would like to offer my comments, to you, regarding the site suitability of the Atlantic Coast Pipeline's proposed compressor station in Union Hill. The actions of our Governor Northam and our appointed Director Paylor, as it relates to ACP LLC, Dominion Energy, is an embarrassment to the state of Virginia.

I am new to the awareness of the compressor station and the ACP LLC, Dominion Energy master plan for our beautiful state. I have been reading and catching up as quickly as possible, since you have chosen to rush this decision, to keep the public's knowledge to a minimum.

It was extremely unethical of our Governor Northam to remove 2 Air Board members, who asked Dominion Energy tough questions about their unnecessary fossil fuel pipeline, which would double carbon emission in Virginia, making it impossible for us to meet the Paris Climate Accords. I had the opportunity to speak with Rebecca Rubin. I learned a great deal, regarding the environmental injustices being forced upon the African American community of Union Hill. It is a disgrace of government representation.

The inaccurate data provided by DEQ and the ACP is further example of erasure of the black community, and it is textbook environmental racism. I have attended the air board hearings and some of the water board hearings. Listening to the discrepancy in the census data is unacceptable. To move forward with such haste without this information being examined is a crime. Union Hill, which is about 85% African American, was established by freed slaves after the Civil War. The proposed site for the compressor station is located near two African American churches and near slave cemeteries and slave burial ground, which are often unmarked.

Delegate McQuinn has a Bill, which passed the house 97-0, which would prohibit this type of racism from occurring in the future. The compressor station would emit toxic air borne carcinogens into the air in Union Hill.

https://www.richmond.com/news/virginia/government-politics/house-approves-mcquinn-bills-on-slave-history-african-american-cemeteries/article_78b477f0-3e58-5d6c-a732-e0748af8f05a.html

Virginia is one, of 27 states in the US on the unattainable air quality list, released in October 2018 by the EPA for exceeding CO2 and Ozone gas limits. If you can not control and achieve the air quality currently, how is increasing 300,000 tons of CO2 equivalent emissions annually going to bring us into compliance?

I ask that you stand with Rebecca Rubin and Sam Bleicher, hear what they heard. I ask, as a concerned citizen of Virginia, you deny this air permit.

At the very least, if more time is needed, stand up for Union Hill and ask for more time to evaluate the data.

Thank you,

Victoria Ronnau

Air Division 1, rr <airdivision1@deq.virginia.gov>

Dear Sirs,

Please deny the air quality permit for the proposed Buckingham Compressor Station because the DEQ did not do a proper site suitability analysis, as explained in the [letter from the Southern Environmental Law Center](#) dated December 7, 2018. This failure violates state law and requires rejection of the draft permit. Thank you for your consideration.

Sent via email to: airdivision1@deq.virginia.gov

PERMIT NAME: Minor Source Construction Permit issued under the authority of the Air Pollution Control Board
APPLICANT NAME AND REGISTRATION NUMBER: Atlantic Coast Pipeline, LLC; 21599 FACILITY NAME AND
ADDRESS: ACP – Dominion Energy Buckingham Compressor Station; [5297 S. James River Hwy](#), Wingina, VA 24599

Dear Air Pollution Control Board Members:

Please deny the air permit for the proposed ACP compressor station at Union Hill because:

-Due process by the VA DEQ and by extension, The Air Pollution Control Board, was disrupted mid decision by the Governor's dismissal of informed members of your board and continues to be disrupted by short, buried-in-the-holidays comment periods that are limited in scope, as well as time, and allow no opportunity for the public to respond to changes that have been made in the air permit or to new, and sometimes false, information presented by DEQ and the applicant.

-Neither the applicant nor VA DEQ staff has adequately addressed the concerns and calls for more information from the Air Board made on Nov. 9, 2018:

- * the most notable and perhaps most relevant is a total lack of response to Rebecca Rubin's call for the need to look at the total air pollution impact of the entire ACP of which the compressor station is such an integral part. The Air Board has a statutory duty to examine the air impacts of the entire ACP before construction and has not done so.

- * the most egregious and most legally vulnerable being the use of the inappropriate EJ Screen to make the inaccurate and immoral declaration that Union Hill is not a predominantly African American community.

- *FOIA Documents released last week revealed that DEQ Director David Paylor lied about the impossibility of doing a qualitative health assessment of the Union Hill community prior to operation of the compressor station.

-The Governor's own Advisory Council on Environmental Justice has advised that the ACP as a whole and the Union Hill compressor station in particular represents stark environmental injustice. The national and state NAACP agrees.

-VA DEQ has consistently manipulated and limited the Air Board's and the Water Board's access to information on the pipelines submitted by the public, by leading Virginia environmental organizations and by legal counsel. The relationship between Dominion Energy and the VA DEQ is not a normal or healthy one and does not serve Virginia's environment or its people. You know this now.

-Compliance monitoring for the pollution levels projected and allowed by the compressor station is left almost entirely to Dominion and the consequences for non-compliance are nowhere defined or guaranteed.

-There is no urgency for the Board to pass this permit since the entire ACP project:

- currently lacks key permits allowing its construction.
- has been forced to stop work in Virginia

- is facing more legitimate legal challenges
- Minor upgrades to the existing Transco Pipeline, now running at less than full real capacity, can satisfy Virginia's current and projected energy needs at 1/3 the cost.
- The new electric generating plants that 80% of the ACP capacity was dedicated to in the initial FERC application of need have been cancelled (both of two in Virginia and four of six in North Carolina) as being both not needed and not cost-competitive.
- Dominion's investment in alternatives is paltry and will continue to be so as long as greater profit is allowed elsewhere.
- And since Dominion's integrated resource plan was recently rejected by the VA SCC commission for overestimating demand for new energy in Virginia.

-Passing the air permit would legitimize the blatant conflict of interest actions by Dominion to bribe and divide the community of Union Hill. Watching this process and the effect on people and congregations I know and love well has been one of the ugliest things I have ever witnessed.

-As long as Virginia continues to destroy its resources and strands its assets in new fossil fuel infrastructure, there will never be adequate investment in the alternative energy infrastructure we must begin to build now. The time for bridge fuels is at an end. Building new fossil fuel infrastructure now is like being 3/4 of the way over a bridge you only have to cross once and then looking behind you and deciding to build a new and bigger bridge.

The fragmentation of the environmental regulation safety net, designed to allow for detailed examination, becomes something quite insidious in the face of corruption. It becomes a way to exhaust and silence ordinary citizens attempting to protect their health, their land, their air, their water and their lives.

We are tired.

We need help from you now. We need a citizen board who will do what it was designed to do, which is to be a firewall against corruption and to act as citizens to protect their fellow Virginia citizens.

I appeal to your humanity, your common sense, your political courage and your sure knowing that you would not put your own child to bed at night within a mile of anything like the proposed ACP compressor station. Deny this permit.

Your fellow Virginian,

Kay Leigh Ferguson

Subject: Air Pollution Control Board
To: <citizenboards@deq.virginia.gov>

I am writing to voice my opposition to the compressor station that is under review in the Union Hill area of Buckingham County. I am going to revisit points that have already been made by others about the disproportionate impact on the minority population which comprises the demographics of this area in terms of noise level and health effects. Have you exposed yourselves to the noise level that results from a compressor station operation? I was unaware of how loud these things were, until educating myself and I invite you to do the same. As a nurse practitioner, I want to emphasize that there are deleterious effects on a person's mental health by being constantly exposed to excessive unnatural noise levels. In addition, the pollution that will be released to the environment (this has been acknowledged by the Federal energy regulatory commission to be in the vicinity of a 40% increase of fine particulate matter) will affect respiratory function and worsening pre-existing respiratory illnesses. The additional factor of the pipeline in question going through Native American lands emphasizes that there was no heed given to environmental justice in planning for this pipeline, which is wholly unnecessary. Thank you for registering my comments.

Sincerely,

Karla Beckman

COMMENTS: air compressors, air pollution, asthma

Keely Wood <keely@bionaturae.com>

Fri, Jan 4, 2019 at 9:05 AM

To: "airdivision1@deq.virginia.gov" <airdivision1@deq.virginia.gov>

Having asthma myself, I am writing to you to **VOTE NO** for the air pollution permit for the compressor station in Union Hill.

- Emissions from compressor stations are significant 60-75% of the damages (health problems) from natural gas activities result from compressor station activities. <https://www.psr.org/blog/resource/webinar-health-impacts-of-gas-infrastructure-pipelines-compressors/>

Compressor stations are a cog in the fracked-gas supply chain: They keep the gas pressurized and moving through pipelines from the wellsite to the destination (gas-fired power plant, LNG export facility, etc.). As **they do so, they leak methane, volatile organic compounds, and other dangerous gases into the atmosphere.**

- Fracking infrastructure poses serious exposure risks to those living nearby. New evidence demonstrates that pipelines, compressor stations, underground storage, LNG facilities, and other infrastructure components are responsible for substantial public health and climate change impacts. The massive build-out of this infrastructure is rarely acknowledged, but pipeline disasters, major methane leaks, and reports of local toxic emissions *and related health concerns* are increasingly common. <https://www.psr.org/blog/2018/03/13/a-new-fracking-landscape-report-on-recent-science-shows-overwhelming-evidence-of-harm/>

The compressor station would benefit only ACP executives and their shareholders. <http://ieefa.org/ieefa-update-2018-ends-with-energy-sector-in-last-place-in-the-sp-500/>

"Within the energy sector, the integrated oil and gas companies were not the only ones having a hard time. In 2018, the stock of the unconventional oil and gas companies that specialize in hydraulic fracturing (fracking) lost 30% of value, and the oil and gas supply companies lost more than 40% . The fracking boom has produced a lot of oil and gas, but not much profit. Complaints by the industry that their poor performance is in part related to pipeline capacity constraints were contradicted recently by Wall Street Journal coverage that there is no shortage of pipeline capacity, **in fact there is too much capacity**. The problem is that industry planners spent hundreds of millions putting pipelines in the wrong place."

The impact on the local community would be overwhelmingly negative, including significant loss of property values and residents becoming asthmatics.

Please vote NO representing all residents, and not for the shareholders that will gain from this project

Deny the Buckingham Compressor Station Permit, Registration No. 21599

Karen Koenig (koenigke@gmail.com) Sent You a Personal Message <automail@knowwho.com>
To: airdivision1@deq.virginia.gov

Fri, Jan 4, 2019 at 8:35 AM

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Sincerely,

Karen Koenig

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

I am writing to express concern that the Air Board is set to vote on permits for the Buckingham compressor station without being presented full and accurate data of the historical significance and actual demographics and population of the community. This is a matter of environmental justice! Ignoring the impacts this massive polluting compressor station will have on this historic community would be a grave error on the part of the board and the DEQ.

I ask that prior to voting, you allow Dr. Lakshmi Fjord to present to the board her complete research into the demographic makeup and the history of Union Hill. Her data will confirm that these permits must be denied.

Sincerely,
Krystal Arnett Henson

"Mission

The Department of Environmental Quality protects and enhances Virginia's environment, and promotes the health and well being of the citizens of the Commonwealth.

Vision

The Department of Environmental Quality's vision is that Virginians will enjoy: cleaner water available for all uses, improved air quality that supports communities and ecosystems, and the productive re-use of contaminated land."

Based on the above quoted mission and vision statements, it would seem that the granting of an air permit would be in direct opposition to the values this agency holds. The vision states that all Virginians will enjoy improved air quality. The granting of this permit would decrease the quality of air in this County given that this would add more pollutants than already exists. This agency, the DEQ, should no longer hesitate to deny such a permit for this basic reason.

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Hello,

I urge you to please reject the permit for the Union Hill Air Compressor Station! The people of this planet do not need this pipeline worsening our attempts to keep our Earth inhabitable as the climate changes due to an overload of carbon and methane! The people of Virginia do not need this pipeline ripping through our gorgeous landscape, pristine rivers, and taking private property by eminent domain when the benefit is solely to Dominion, the corporate giant! And thirdly, the people of Union Hill do not need this environmentally dangerous intrusion to their community, even as Dominion tries to buy them off! Just say no and help us turn the world to a cleaner and more just place for all of us to live. Thanks,

Marc Koslen

Buckingham Compressor Station Air Permit Comment:
Lakshmi Fjord, Ph.D.
Jan. 4, 2019

First, allow me to express my deep appreciation to the Air Board for your decision to allow a short public comment period on the “new information” on demographics and community engagement added by Dominion and DEQ to the air permit outside the public comment period. Rather than limits you set on comments to these submissions and Union Hill Community Research and Methods Report and SELC’s methods critiques, however, DEQ added historic cultural resource reports, emails between me and Marc Wagner of VDHR, one NAACP letter without the second one written to correct its assertions of Virginia Conference of the NAACP support for the Union Hill compressor station.

I was quite surprised at the Dec. 19 meeting when Mike Dowd responded to my Union Hill Community Study Report by replicating to a word the very misinformation given by Dominion on alternate site comparisons that were the bases of detailed critiques in this report. As if to foreclose any possible evidence of environmental injustice in Dominion’s site CS 2 choice based on my near four years of community research, Mr. Dowd then ventured into the historic cultural resources that were Part I of my community study. Misinterpreting the context and dialogic nature of emails between Marc Wagner and myself, he arrived at unfounded conclusions about the lack of historic significance of former slave and freedmen cultural resources in Union Hill. He does so without the expertise or understanding of distinctions in rural historic districts, cultural landscapes, and Traditional Cultural Places (TCP), as well as of historic register eligibility processes with which to draw such conclusions.

Thus, writing my public comment has posed a huge challenge in a context where DEQ seems focused not on evidence-based inquiry but on invalidating my demographic and cultural historic research that prove Union Hill to be an environmental justice community. I ask your forgiveness for providing more detailed information than to further critique this CS 2 site choice. For, the ACP is notable for its environmental justice issues at every site of its major infrastructure.

It is worthy of note that in the interim between the close of public comments on Sept. 21, 2018 and today, the State Corporate Commission has given Dominion a deadline to prove their claims of market needs for ACP public utility provision. This reflects the growing body of evidence that the ACP is solely self-serving. The new gas-fired power plants with which Dominion applied to FERC for a certificate are no longer to be built, because renewables are far cheaper to build, in their words.¹ We learned that instead of providing support for economic development, the ACP would contribute billions of dollars of redundant utility infrastructure indebtedness to captive residential and business consumers. In Virginia, ratepayers are allowed to bear Dominion's corporate ACP indebtedness through higher utility costs. ACP will thus slow economic development in our state.

And, Buckingham County would be forced to bear the largest per Virginia county ACP impacts to future economic development because of its disproportionate burden of risks and hazards at this largest-toxic pollution emitting compressor station of the three. In this A1 Agricultural District, with no existing industrial sources of pollution, the people of Union Hill have been such good stewards of their air that the present higher than average ambient air at the CS 2 site allows Dominion to pollute at the highest levels of every form of toxic pollution related to unconventional gas compressor station "activities."

ACP FEIS: TABLE.4.11.1-7, P. 4-557 Potential Emissions by Compressor Station

TABLE 4.11.1-7							
Potential Emissions by Compressor Station for the Atlantic Coast Pipeline							
Compressor Station	NO _x	CO	VOC	SO ₂	PM/PM ₁₀ / PM _{2.5}	CO ₂ e	HAPs
	(tons per year)						
Compressor Station 1 ^a (Lewis County, West Virginia)	42.5	70.7	30.3	7.08	12.2	277,088	5.22
Compressor Station 2 ^b (Buckingham County, Virginia)	50.2	95.2	32.7	7.33	43.9	323,736	5.63
Compressor Station 3 (Northampton County, North Carolina)	19.7	31.1	21.8	3.10	18.4	129,243	3.42
^a ACP Kincheloe and SHP CNX M&R stations emissions are included in the emissions for Compressor Station 1, as the facilities would be collocated. ^b The Woods Run M&R station emissions are included in the emissions for Compressor Station 2, as the facilities would be collocated.							

Buckingham's negative economic development impacts must be considered not arithmetically but geometrically more harmful to present and future generations solely because of the CS 2. This site choice has already devastated planned, sustainable economic development in Union Hill: a greenhouse complex not built across the street; a vineyard and winery not undertaken; a dairy and a cattle farm long since in operation now threatened by health impacts and toxic contamination). False promises of "revitalization" to specific individual "entrepreneurs" to accept Dominion money in exchange for living with the CS 2, presume that tourists or new businesses would seek to visit or move to Buckingham. Where the schools are already imperiled by lack of funds, where large swaths of internet deserts make home-based businesses nearly

¹ Reuters, May 24, 2018: "Vista Energy and Dominion Energy ... are done building combined-cycle natural gas-

impossible, then further burdened by hazards to air and water by proximity to a huge toxic emitting industrial complex.

Our community study asked participants to respond confidentially to questions about pre-existing medical conditions in the close impact area. Buckingham is already drastically medically underserved. Union Hill's population is already skewed disproportionately towards the very elderly and very young -- because of out-migration by young African American adults to more equitable access to well-paying jobs. Thus, the known impacts to health from emissions from far smaller, even single turbine engine compressor stations would fall most heavily upon already vulnerable populations within an identified environmental justice population.

As I will describe more fully later in my discussion of the historic cultural resources of Union Hill, when we consider these economic, health, and cultural costs vs. the so-called "benefits of the activity" of a huge compressor station, in Union Hill we are talking about destroying a traditional cultural place that by rights ought to be out of the question for new, discriminatory burdens after centuries of living with enslavement and its legacy here. Perhaps it is as difficult for Dominion, FERC, and DEQ staff to imagine how unusual a place Union Hill is today -- as it was for us to grasp when we moved to Buckingham to establish Yogaville Virginia in 1979. Where else in the U.S. right now do the descendants of white plantation owners still live near the descendants of people their ancestors enslaved? And, these are majorities not minorities of residents in Union Hill.

Over the years of working on the Union Hill community study together, we have grown closer across our different race and upbringing backgrounds. As we do so, each has learned more about the history of Union Hill once part of the "hidden and forgotten" record of black life in Buckingham. Silence and erasure became a means to prevent past violence from coming to the surface in the present. At the same time, even forgotten kinship through long past intermarriage surprises Union Hill freedmen descendants. First told to me that they are "unrelated by kinship, the network of property bought by ancestors after freedom list neighbors then who are also neighbors now. The names on headstone in the three historic black cemeteries at Union Grove Missionary Baptist Church (est. 1910) and Union Hill Baptist Church (est. 1868) record the same last names as those now sitting in the pews in our Friends of Buckingham meetings.

This cultural knowledge matters for a host of reasons. For the purpose of this comment that leads to my imploring the Air Board to deny this air permit, it matters because whatever costs to community the activities of the CS 2 cause, it is to a whole, interconnected web of kinship relationships. As I wrote in the Community Study Report, these Xs that mark households on a map, are of a historic cultural landscape, a "traditional cultural place" (TCP). Where webs of kinship over hundreds of years mean costs to health of new toxic emissions, costs to medical care, care-giving, even transportation in a medically underserved county would be borne by a social network of intermarried, related families while slowly (or quickly?) creating tears in the fabric of traditional cultural activities and enjoyments. To have a man camp across the street instead of a greenhouse complex, to have a recreation center where to venture out of one's home risks exacerbating asthma, diabetes, heart conditions, migraines and more; to no longer be able to hold yearly huge black heritage family reunions of upwards of 250 people, un-knits the traditional cultural activities that have sustained Union Hill people through the hardships of enslavement and lives as freed people under segregation. Falsely named "community revitalization" represents perhaps the community's death knell.

In what follows, I will ask you to read specific public comments made by others that will give further evidence to points in my comment below. **Please read SELC's comment**, as they represent Friends of Buckingham, including in our request for further public comment time, sent on Dec. 1, 2018, to point out the serious flaws in the demographic methods used by DEQ, and misinformation about community engagement by both Dominion and DEQ. Further cited in our procedural complaint was the removal of two of the six Air Board members after the public hearings had taken place.

The ACP process has led to growing concerns about efforts by Dominion to interrupt by any means possible just and fair public participation in highly impactful permit decision-making processes – whether by last minute offer of an MOU for a “tap” into the ACP in Buckingham or a post-public comment “community engagement package” whose “revitalization” promises have proved as toxic to the community psychologically as the CS 2 may prove physiologically, if built. In Dominion’s “new submission” to the Air Board, they included an outdated Air Board policy -- as if current -- that restricted the Air Board’s capacity to consider site suitability, environmental justice, climate change impacts, and more. To this witness, their action gave the impression of a threat to the Air Board’s future independent air permit decision-making if you should deny ACP’s air permit against Dominion’s interests. Taken together, actions by our governor, by DEQ, and by Dominion represent direct interference in Virginia’s regulatory processes meant to ensure public engagement may provide independent expert and first person impact information as evidence needed in air permit decision-making.

Particularly troubling to a growing number of Virginians have been the efforts by VDEQ’s Air Division to use all means possible to serve Dominion’s need to “prove” there is neither a significant population of majority minority people at their chosen CS 2 site, nor that the minority in question is a community largely of former slave and freedmen ancestry whose cultural resources are “worth” preserving.

Yet, Mr. Dowd and his staff both know and acknowledge that Union Hill is an environmental justice community. On Sept. 20, 2018 – the day before the close of public comments on the air permit, DEQ invited FoB to a hotspot meeting, in which Mike Dowd informed us, “Union Hill will be our lessons learned about environmental justice going forward.” It was also at that meeting where Air Division staff reiterated how poorly written by Dominion was the Buckingham air permit, that it required 3-4 revisions over years, noting, “our experts at the agency ended up teaching them the regulations. We have people who try to leave out information so that the DEQ may miss it.”

To which we, and many Virginians, reply, DEQ has known about the environmental justice issues of this site choice since 2015-early 2016 when 71 residents wrote letters to DEQ about the community issues of the Union Hill site choice (**see new comment by Chad Oba, President, Friends of Buckingham**). That DEQ chose to never respond to our reaching out to inform DEQ and ask for dialogue immediately after this site choice -- is a total failure of their responsibilities toward community engagement, factual information gathering, and fair distributive uses of taxpayer funding. Now that the environmental injustices of this siting have become a politically charged issue, DEQ cannot now say they will use their failures and lapses to teach them the regulations for future reviews only.

For, now DEQ is using Dominion's tactics by "trying to leave out information so that the [Air Board]" may miss it." In the case of environmental justice review of this air permit and its site [un]suitability for the "activities proposed," we the professional social science and legal experts in this field and the most impacted people have been for 3 years DEQ's teachers on the regulations they must follow to ensure environmental injustices in site choices are not permitted (please see **Dr. Mary Finley-Brooks new comment**).

Site Suitability: more critiques

Mr. Dowd's restatements on alternate site analyses on Dec. 19th included the claim that it was FERC who "decided" on the far smaller, more densely populated, African American majority Union Hill CS 2 site located on a major N/S evacuation route. Yet, unlike in Dominion's "failed" draft air permit iterations with missing information caught by DEQ, FERC relied solely on Dominion's information to compare the Midlands Rd. vs. Union Hill site. Since missing information involved basically every characteristic that matters to the choice, FERC affirmed "the primary site" -- Dominion's preference.

For Mr. Dowd to cite the .02-acre greater construction footprint and 1-mile longer pipeline as the only reasons to choose a site less than ½ the size of Midlands Rd. does not even meet the standards of common sense. The ACP project made continuous changes before this air permit was completed and placed online by DEQ for public comments. Since the FEIS was issued on July 17, 2017, Dominion has changed its pipeline route into and out of the 68.5-acre parcel at least 3 times. More significantly to the Air Board for site alternative comparisons, Dominion is actively seeking enlargement of the 68.5-acre site in order to "conduct the activities for which they applied." Thus, this smaller site cannot encompass what their business plan requires for "the activity" of transmitting ACP gas along the Transco to Dominion's Cove Point, MD LNG facility for export.

These changes in site size for activities desired, have taken place since the air permit was filed as complete for public comment by DEQ on Aug. 8, 2018. And, they will not be resolved by Jan. 8, 2019, when the Air Board makes its CS 2 air permit decision. Thus, the "construction footprint" in the air permit under review is not accurate, rendering absurd Mr. Dowd's present reliance on site data given by Dominion to FERC for comparisons over 2.5 years ago.

I ask you to please read **Mr. Richard Walker's Harper Family public comment** for details of Dominion's injunction of eminent domain seizure of over .79 acres of their family heritage land at the Transco ROW. The surveyor who took the survey points explained to Mr. Walker that the points taken ensured ACP's purpose "to intersect the ACP with the Transco." And, the Harper family seizure is one of two new ones at the apex of the original 68.5-acre triangle-shaped site. Dominion also has seized part of the Haskins heritage land from Cora Perkins nearest to the ACP CS 2 boundary-line.

Missing but absolutely necessary information provided by Dominion has shaped the entire regulatory decision-making process from the first.

In fact, it was missing demographic and historic cultural data that led me to undertake the community study Parts I & II, to "call out" in the exact ways that DEQ called out Dominion's missing technological and construction information on the air permit. At the hotspot meeting

referred to above, Mr. Dowd admitted that leaving decisions about new toxic emissions source site choices to local Boards of Supervisors is problematic, “since local decisions come first in the process, DEQ needs to work more closely with Boards of Supervisors who are writing the future with very little information.”

In my research report, I described some of the consequences of missing information not given by Dominion to the Buckingham Planning Commission and Board of Supervisors. To that missing yet vital information, I now add consistent omissions of two key pieces of information given to decision-makers at each step of the regulatory application process. First, is the omission of accurate total site descriptions of the facilities to be co-located on this 68.5-acre parcel, their construction footprints given in site drawings not available to the public, and all construction details for this far larger compressor station complex than ever built by Dominion. Yet, it is sited where more densely settled households would create higher impacts.

In the special use permit, Dominion neither gave information about chemicals other than ammonia to be stored in the 2 above ground and 1 underground storage tanks, nor divulges their location on the site. Consequentially at this intersection of 4 existing Transo pipelines with the ACP underground, we find missing the “M&R station” co-located with the 54,000+ hp turbines “compressor station” on a site less than ½ the size of the alternative. Since the M&R Metering and Regulatory stations require pressurizing pipeline contents at highest allowed psis of pressure in order to achieve transmission over 200 miles bi-directionally, this absence is highly problematic.

Whether by Dominion or FERC or both together, their co-location doesn’t exactly pop out at the reader. Nor was it ever presented to the Buckingham Board of Supervisors. FERC’s ACP FEIS addresses M&R stations and Compressor stations separately – as if it were possible to achieve the “activities” necessary without their infrastructural linkage.²

ACP FEIS: Table 2.1.2-1 Compressor Stations, P. 2-6

Compressor Station 2 Buckingham		Description
County, VA	191.5	Construct new 53,518 hp station that would move gas through the proposed AP-1 mainline and allow bidirectional flow with the existing Transco pipeline system. Install four gas-driven compressor units, filter/separators, gas coolers, inlet air filters, exhaust silencers, tanks, blowdown silencers, heaters, and auxiliary generators. Construct new compressor, office auxiliary, utility gas, drum storage, and storage buildings.”

NOTE: no mention of M & R station or underground storage and above ground storage “tanks” in CS 2 site facility description.

² FERC FEIS, July 17, 2017: Compressor Stations Table 2.1.2-1 Compressor Stations, P. 2-6;

ACP FEIS: Table 2.1.2-2 M&R Stations for the Atlantic Coast Pipeline, P. 2-8;

ACP FEIS: TABLE.4.11.1-5 Estimated Construction Emissions for the Atlantic Coast Pipeline, P. 4-557

“ACP FEIS: Table 2.1.2-2 M&R Stations for the Atlantic Coast Pipeline, P. 2-8

Woods Corner M&R Station

Buckingham County, VA

191.6

Station would take natural gas from the proposed AP-1 mainline and the existing Transco pipelines and could discharge into these pipelines.”

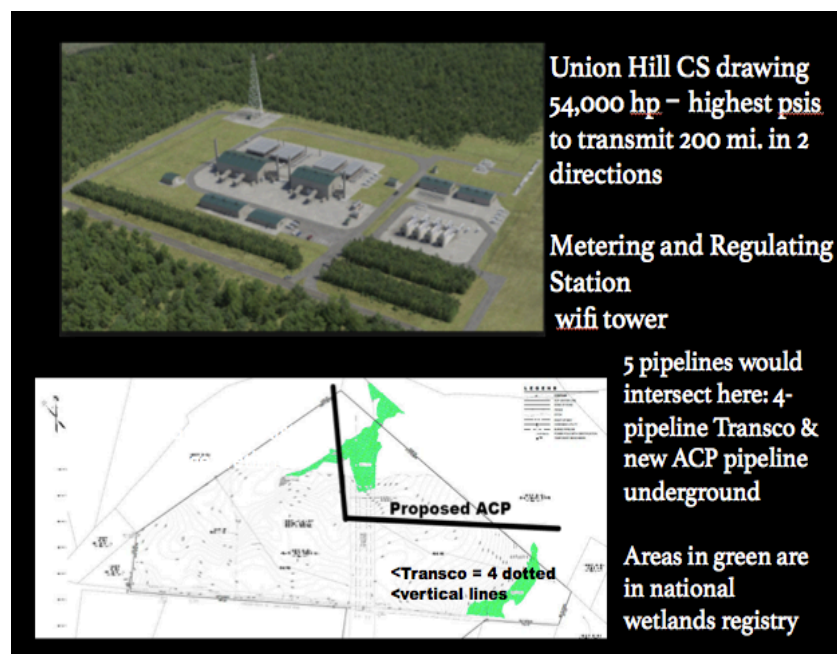

Readers must be on the alert for different location names used: it's Buckingham compressor station but Woods Corner M & R station. Neither description of activities and facility details includes the other. When it comes to emissions, it becomes Woods Run M & R station

Are these minor grievances or do they point to deliberate patterns to confuse anyone not privy to the accurate site information? Why are these continuous “errors” and omissions always to Dominion's benefit and taken together add up to extremely significant consequences? Don't they actively disrupt laypersons' understanding about what exactly the CS 2 will consist of? Making it hard to imagine the activities/operations taking place at this complex and their 365 24/7 effects?

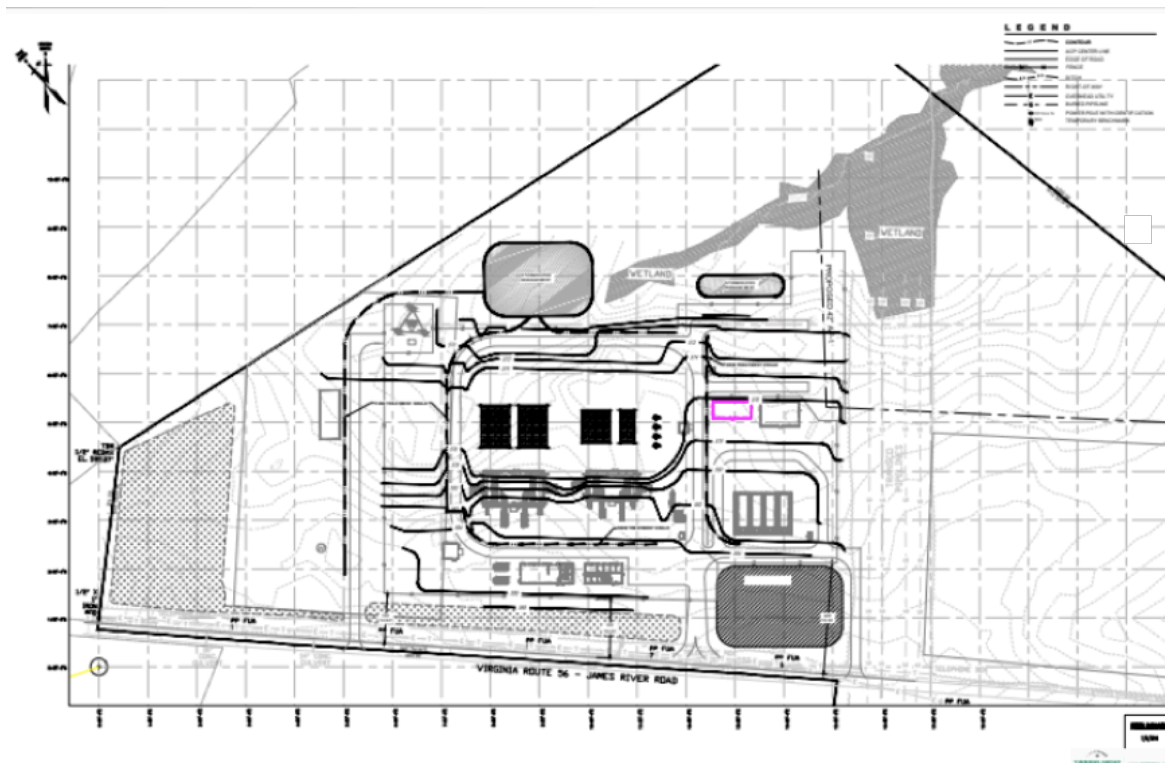

The types and sizes of the component parts of the CS 2 facility proposed for Union Hill must be considered in toto -- not fragmented to the advantage of Dominion. Thus, I continue to aggregate the cumulative impacts that have been fragmented by “leaving out information” in the thousands of pages of ACP application details one must read to perform this service.

Putting well water into the cumulative picture: Wetlands and single source aquifer at CS 2

This site map of the proposed CS 2 68.5-acre site was given to those who attended Dominion's “Buckingham Community Advisory Committee meeting” where I was an observer in 2016. On the white site rendering please note the large wetlands in the upper part of the triangle of this parcel or East, and a smaller one from Ripley Creek in the lower right or South.

Now, when zeroing in below to drawing of built facilities, we find Dominion intends to fill the entire north or left side of their 68.5-acre parcel from frontage on Rt. 56, a major N/S route to close to their boundary line. The grey lines are the existing Transco within a large wetlands.

FERC's FEIS omits use of the national wetlands inventory database to locate wetlands. When comparing the Midlands Rd. alternative with "the primary" site (Union Hill), FERC reports 0.0 wetlands for both: "While neither site contains wetlands, there is a small intermittent water body on the periphery of the primary site."³ This is the small one to the south of ROW, below.

Yet here is the national inventory inconveniently registering the wetlands on the Transco ROW in this image created by Stephen Metts with an overlay of the CS 2 development footprint imagery, and a LIDAR surface.

If we were not so fortunate to have a geospatial expert helping us, left to Dominion or FERC information, the risks posed to 100% of Union Hill's drinking water, in a single source aquifer, would effectively disappear. Perhaps one imagines a municipal water supply that does not exist in Buckingham, except in Dillwyn? In their FEIS, FERC explains, "The EPA defines a sole source aquifer or principal source aquifer area as one that supplies at least 50 percent of the drinking water consumed in the area overlying the aquifer, where contamination of the aquifer could create a significant hazard to public health, and where there are no alternative water sources that could reasonably be expected to replace the water supplied by the aquifer (EPA, 2016a). ...There are only two EPA-designated sole source aquifers in Virginia, but neither is in proximity to ACP facilities."⁴ As if by magic wand, the hazards posed by CS 2 to Union Hill's water supply miraculously disappear.

In rebuttal, I copy below the summary provided by Pam Dodds, Ph.D., Licensed Professional Geologist, in her Buckingham County Aquifer Report submitted in my Atlantic Coast Pipeline: Technical Information Response, Nationwide 12 permit Specific Wetland and/or Stream Crossings public comment to DEQ Water Control Board on July 15, 2018.

"The aquifer underlying the ACP construction corridor in Buckingham County is referenced by the U.S. Geological Survey (https://pubs.usgs.gov/ha/ha730/ch_g/G-text8.html#piedblurdge) as a crystalline rock aquifer underlying the Piedmont Physiographic Province. The Candler Formation bedrock, consisting predominantly of phyllite, schist, and marble, underlies the James River at the proposed ACP HDD crossing. To the east, the Candler Formation also underlies the proposed ACP gas pipeline construction corridor to the area including the proposed location of Compressor Station #2; however, metagraywacke is also predominant, along with phyllite, schist, and marble.

There will be deforestation, soil compaction, and dewatering during construction of the proposed ACP gas pipeline installation. When rainwater is intercepted by trees on forested ridges, the rainfall gently penetrates the ground surface and migrates downward through the soil to bedrock. The water then flows through bedrock fractures and along bedding planes to continue migrating downward or to form seeps and springs where the fractures or bedding planes intercept the ground surface. Deforestation results in increased stormwater runoff and decreased groundwater recharge. Deforestation facilitates greater rainfall impact, causing erosion. The increased stormwater discharge transports sediment to receiving streams. Where sediment is released to receiving streams during construction activities, the sediment accumulates in the stream beds, increasing embeddedness, which remains in the stream bed after construction has been completed. The increased stormwater discharge in the streams also results in downstream stream bank erosion, releasing additional sediment to the streams. Increased embeddedness, resulting from sediment accumulation in streams, fills in the spaces between cobbles and boulders on the streambed.

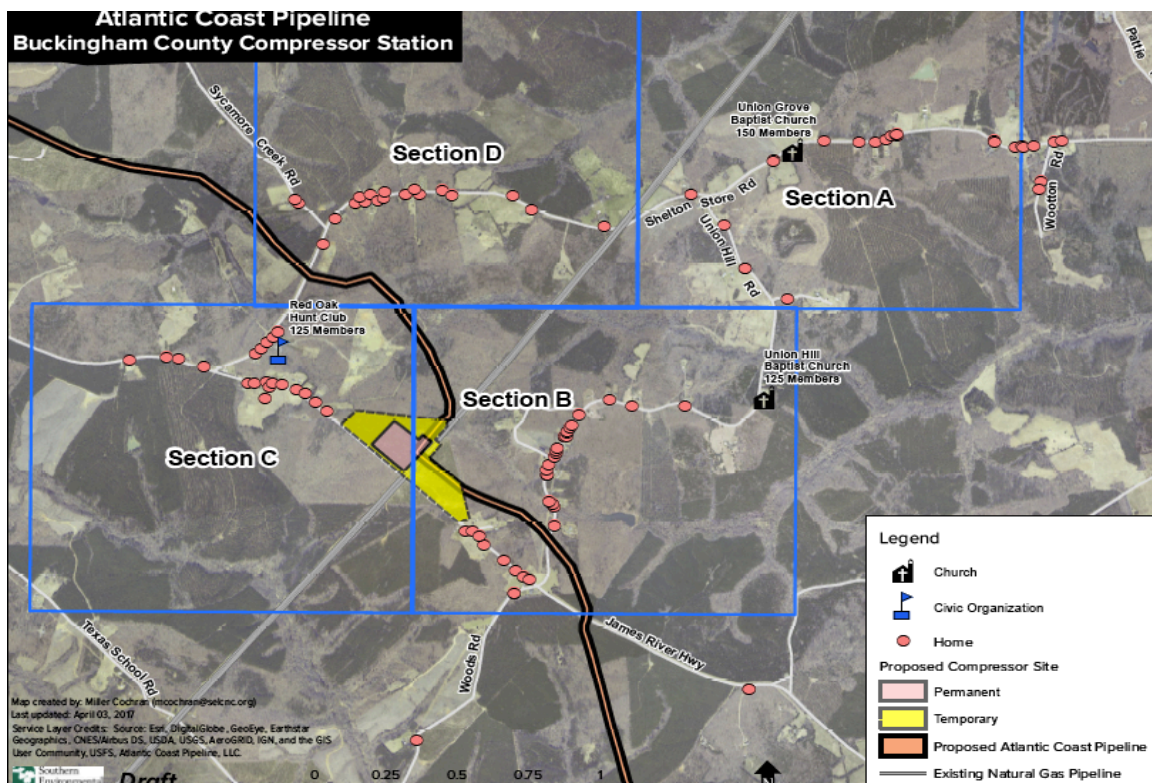

Soil compaction from heavy equipment in the construction corridor, and also from stockpiled soil in the sediment underlying the stockpiled soil, results in increased stormwater runoff and decreased groundwater recharge. Dewatering of the pipeline trench intercepts groundwater and directs the groundwater through pipes and/or French drains onto the ground surface. Trench dewatering thereby increases surface runoff while decreasing groundwater. The pipes and/or

⁴ FEIS 4.3.1.2 Sole Source Aquifers 4-78

French drains remain in place after completion of construction, causing continual interception of groundwater and directing of the groundwater onto the ground surface. Again, the increased surface runoff transports sediment to receiving streams and increases stormwater discharge, causing downstream stream bank erosion.

Construction of the proposed ACP gas pipeline in Buckingham County will result in degradation of the water resources, both groundwater and surface water resources” (Dodds, 2018). Nothing could be plainer than that.

As a point of reference to the household impacts on water wells at this site, I copy our household map of the people living on all sides of the 68.5-acre CS 2 site, each of which has only well water for all water uses, including drinking water. These wetlands represent above ground and below ground networks of water that would be devastated if one of the many possible leaks at this site occurs.

Why the methods used in Union Hill Community Study are necessary to environmental justice review

I will not reiterate my critiques of the flawed methods used by Dominion, FERC, and finally DEQ Air Division when using census tract data only to refute the findings of the Union Hill Community Study whose statistical significance is far higher because the methods are replicable on the ground. Stephen Metts, of the New School, is a professional geospatial analyst whose expertise lies in demographic analyses for unconventional gas infrastructure projects. For the Air Board’s benefit, Stephen agreed to replicate DEQ’s methods to discover why theirs led to such faulty data on environmental justice. **Therefore, please read Stephen Mett’s public comment**

on why the Air Board must not accept DEQ's demographic methods to refute the findings from my Union Hill Community Study Research and Methods Report.

The comparisons I made in that report on why our door-to-door method is highly statistically significant when census tract data is cited by NEPA as highly "unreliable," now gain further credence for Virginia projects. On Dec. 18, 2018, Governor Northam issued Executive Order 27 (2018) establishing the Virginia Complete Count Commission for the 2020 Census.

The timing of this EO in the midst of the Air Board decision-making on the site chosen by Dominion for their CS 2 could not be better. EO 27 notes, "Historically, the U.S. Census Bureau has experienced low survey response rates from many communities across the Commonwealth" ... with particular concerns for counting minority children. Since federal money is allocated based on census,⁵ Gov. Northam has found there is economic benefit in statistically more accurate household data.

This Executive Order has particular significance for Buckingham County. You may know that counties are responsible for raising the funds needed to digitize and publish online in accessible formats their county data. This includes courthouse records both historic and current. With the burning of the courthouse in 1869 by vigilantes and, previously, when British soldiers burned the Scottsville, VA courthouse during the Revolutionary War, Buckingham's historic documents are sparse. And, what is available has not been digitized. From working with both Stephan Metts and SELC to review the methods used by DEQ to arrive at such low population density at the CS 2 site using census tract data only, I learn that Buckingham lacks customary accurate address data. This includes 911 records online. Nor, apparently, does Buckingham's census data disaggregate, which allows researchers to find "pockets of minorities" in its census tracts. I'm certain Stephen Metts analysis will better explain this fundamental problem.

To better understand why the methods we used in the community are far more effective no matter if census tract data were digitized, I ask you to read the public comments made by Union Hill Community Study team leaders, **Ruby and John Laury, Marie Gillespie, Chad Oba, and Heidi Dhivya Berthoud**. Team leaders describe why our community designed, culturally appropriate participatory methods led to far more accurate demographic findings than by census takers in this same neighborhood -- for reasons outlined in my Research and Methods Report. Further, I ask you to **read the expert comment on the participatory community methods used in the study as reviewed by Professor James Igoe**, an internationally respected anthropologist who specializes in community-based action research in diverse global contexts.

During this comment period, in tandem with working with Stephen Metts on the mapping to geolocate our study household address points, I revised the Community Study Statistics in-a-nutshell below, adding study data on family heritage and unmarked graves located in Union Hill.

Union Hill Household Study (01-02-2019)
Lakshmi Fjord, Ph.D.

⁵ <https://www.governor.virginia.gov/newsroom/all-releases/2018/december/headline-837267-en.html>

100 households were identified by US postal service markers in the ¼-mile to 2-mile radius of Union Hill, Buckingham, Virginia -- site chosen for Atlantic Coast Pipeline Virginia compressor station. ACP used Buckingham County's 2010 average person per square mile census data - 29.6 people - as the site population.

Our study teams reached **77 households of 100 households** for a **77% response rate**.

Weekday residents of 77 households: 200

Weekend, bi-monthly, and annual family reunion numbers add hundreds more frequent visitors.

Of the 67 households for which we have a full set of data, **42 or 62.6%**, are known descendants of formerly enslaved people at nearby plantations.

8 households report unmarked slave and freedmen graves on their property or nearby.

Race by self-identification: Taken together minorities make up 83.5% of residents:

	African American	Native American and African American	White	Native American and White	Native American	Hispanic	Asian
Count	124	27	33	9	3	3	1
%	62	13.5	16.5	4.5	1.5	1.5	.5

Weekday residents' ages: 32% are Children; 25% Elderly. Both age ranges mask actual ages that are disproportionately the very young and very old (age range used to protect confidentiality):

Age Range	0-6	7-18	18-21	22-40	41-65	65+	Unknown	Total
Count	28	36	5	36	43	50	2	200
%	14	18	2.5	18	21.5	25	1	100

Health Data: For the 67 households where we were able to have extensive questionnaire time, **35 responded with pre-existing medical diagnoses** or **59.32% of reached households**.

Highest levels of existing diagnosed health conditions are for autoimmune conditions (asthma, allergies, multiple sclerosis, lupus) and lung/respiratory conditions (COPD, asthma, chronic bronchitis & pneumonia, congestive heart failure), circulatory conditions (heart disease and heart conditions, stroke) and diabetes -- all known to be caused by environmental toxins and exacerbated by them. Other conditions include arthritis, bipolar disorder, cancers (brain and breast cancer), epilepsy, kidney condition. migraines, light sensitivity, noise sensitivity, and skin disease.

Map created to site historic resources, freedmen heritage land, and slave gravesites for “Union Hill/Woods Corner Rural Historic District” listing by Preservation Virginia as a “Most Endangered Historic Place in Virginia” on May 3, 2016.

The Place of Union Hill in Historic Preservation and the Legacy of Virginia Slavery

It was the omission by Dominion in their 2015 historic cultural resource reports for Union Hill and Buckingham County -- in contrast to the hundreds of pages, photographs, and archaeological surveys reported for all other counties and states on the ACP route -- that led to my undertaking a site-specific historic research project of Union Hill. My plan was to get as far as I could to find historic records in time to apply to Preservation Virginia for a “Most Endangered Historic Place in Virginia” listing in February of 2016. I soon learned that Dominion’s complete erasure of Union Hill’s very existence as well as its historic cultural resources – some of which are places where the activities associated with this traditional cultural place most often take place – Union Hill Baptist Church and Union Grove Missionary Baptist Church -- have historic correlations.

Mr. Charles White, originally of Clifton Forge, VA married into the freedmen family of Robinson/Bookers in Union Hill when he moved to Buckingham to become a high school teacher at the segregated Ellis Technical School. He has written two books about African American and slave history in Buckingham, *The Hidden and The Forgotten: Contributions of Buckingham Blacks to American History*, 1985; and, less pertinent to this historic preservation effort, a book co-authored with E. Renee Ingram, *Buckingham County (VA) (Black America Series)*, 2005. Mr. White’s 25-year Buckingham Blacks research project was also undertaken to counter the near-erasure of black history because vigilantes burned the courthouse on the night the 15th amendment was passed (Feb. 26, 1869), giving former slaves the right to vote where

they out-numbered whites 2:1. This arson was to burn the wills of inheritance, purchases of freedom, which could be evidence used in lawsuits for restitution for enslavement. Mr. White's thorough research work is taken from social history or alternative texts to courthouse records -- including Confederate Army pension records for slaves who worked for officers or sent by owners as part of slave draft allocations required by the Confederate government in Richmond. Yet, Mr. White's books could not help me with site-specific historic information on Union Hill because they are name-based not site specific.

In consultation with Justin Sarafin of Preservation Virginia about how best to categorize the historic area that I would research and document in Union Hill to apply for Most Endangered Historic Place listing, we realized it is truly a historic landscape. The rural historic cultural landscape or district is defined as "a geographic area that has historically been used by people, or shaped and modified by human activity, occupancy, or intervention, and that possesses a significant concentration, linkage, or continuity of land use, vegetation, buildings and structures, roads and waterways, and natural features."⁶ At this time, when proceeding with eligibility work, it will perhaps be better aligned with what I know now about Union Hill to term it a "traditional cultural place – TCP."⁷

The shared cultural historic character of this district is of former plantations, some of which still stand, and numerous slave cemeteries recorded and also known only by family knowledge on both black and white family lands, some of the former purchased by freedmen pre- and post-Emancipation. Along what is now Rt. 56 / S. James River Highway are a series of plantations once owned by the Bondurant and Moseley (derived from Mosier) families, both Huguenots, the former arrived in Virginia in 1700⁸.

As with other parts of Buckingham County, the Union Hill part of this district on the Northeast side of Rt. 56, which has been historically and remains African American, is characterized by clustered housing of relatives, either on separate small parcels divided by inheritance or on one larger one and large tracts of woodlands, with fields interspersed. This follows a long-held rural pattern of multiple dwellings on one parcel, with a larger frame or brick home and now mobile and modular homes or smaller frame dwellings close by. The Union Hill part of the district is rather densely populated for a low-population, low-income rural county with a past two-decade history of out-migration for lack of living wage jobs.

Because this district of Buckingham involves all of the most interesting chapters in Virginia's prehistory, colonial and post-colonial histories – from Monacan copper and gold mining nearby and extensive trade routes through it to Huguenot immigrant landowners granted parcels by the

⁶ Natural Historic Register Bulletin: Guidelines for Evaluating and Documenting a Rural Historic Landscape, by Linda Flint McClelland, *National Park Service* and J. Timothy Keller, ASLA, Genevieve P. Keller, Robert Z. Melnick, ASLA *Land and Community Associates*. 1989; Revised 1999
https://www.nps.gov/nr/publications/bulletins/nrb30/nrb30_3.htm

⁷ **Traditional Cultural Place (TCP)** is a property that is eligible for the NRHP because of its association with cultural practices or beliefs of a living community that are rooted in that community's history and that are important in maintaining the continuing cultural identity of the community. This type of resource will likely require specific expertise provided by Tribes or community members to assist in identification and evaluation" (Ibid: 29).
<https://www.achp.gov/digital-library-section-106-landing/traditional-cultural-landscapes-section-106-review-process>

special status given by the Commonwealth of Virginia to Huguenot religious refugees fleeing persecution in France; from these slave economy-fueled plantations that early successfully grew tobacco for export to the Virginia “gold rush” with accompanying Welsh migration that brought Joseph Jones to build Wilderness in 1780; from the plantation family and slave soldiers in the Revolutionary War, War of 1812, and Civil War to the freed slaves who became first elected delegates to the Virginia House of Delegates starting in 1869; the effects of Jim Crow loss of civil liberties, and more – all were experienced by inhabitants of this district.

The outsider wonders how Dominion’s historic cultural resource contractors could have erased this district’s history? Buckingham was part of the original shire formed in colonial Virginia in the early-mid 1600s. Captain John Smith wrote of a Monacan village, Monahassanough, here. In what later became Buckingham, records of land grants and histories of residence are of some of colonial Virginia’s most well-known names: Cabell, Pocahontas, Bolling, Jefferson, Eppes, and Hemmings. Govs. Thomas Jefferson and James Monroe each signed land grants in what became Buckingham in the late 1700s to French Huguenot refugees fleeing persecution in Europe. They founded the historic plantation complex of which the proposed compressor station site is one. The historic register eligible districts of Wingina and Warminster do not include the fact that historically these encompassed both sides of the James River -- where families built residences on both sides and daily used their ferries back and forth.

Unlike counties in Virginia where their slavery past has been buried deep under later development, Buckingham’s poor economy of mainly resource extraction jobs in forestry and mining, a prison, and farming has left unchanged the fact of white and black families with the same last names living nearby with a shared history on opposite sides of the violent history of enslavement. The spouses of descendants of slaves living in Union Hill speak of how shocked they were to move there from California or North Carolina and to witness those natives’ “almost total lack of feeling that they can change anything in this county.” Mr. Charles Harper (great grandson of Betsey Hemmings, niece of Sally Hemings) said, “I can tell you what I’ve never even told my children – the history of Betsey Hemmings told me in secret by Walter (Patteson).” To historians of the South, none of this is news. However, the particular character of Buckingham is its isolation because of its economy, and the effects of that isolation on generations of inequitable social dynamics. Our hope is that by better knowing the history of this district from all perspectives and forms of evidence and not just that of “big houses” and “big men” that more inclusive history will address some of the deep wounds of slavery history.

Buckingham is generally known for the long residence of key families since colonial times up to the present. There are large tracts of woods that are regularly clear-cut or culled depending upon the landowner. Tobacco was once a main crop, with hay and wheat for animal husbandry. There is one remaining market cattle farm and orchard owned by a descendant of slaves, on land that has been used for that purpose for at least 150 years. Several landowners have small home-based businesses on site: a Medicare/Medicaid van service, carpentry, plumbing, a goat farm, stock feed hay farming. Most landowners have family gardens and cull their firewood from their woodlands.

The majority of African Americans in Union Hill are closely affiliated with the historic black church they attended from birth no matter where in Buckingham they now live. Two such churches are located in CS triangle: Union Hill Baptist Church that began as a Brush Arbor in 1868 after Freedmen were first allowed to break away from the White Baptist church, Mulberry

Grove on now Rt. 649 / Mulberry Grove Rd., they attended during slavery days. In 1887, Union Hill Baptist church was built on a 2-acre parcel on Rt. 663/ E.Union Hill Rd. The original burned and was rebuilt. It has an extensive black cemetery with graves bearing the names shared with white plantation families: Perkins, Moseley, Claiborne, Ellis, Eldridge, Laurys, and many others.

The other historic black church is Union Grove Baptist Church located on Rt. 660 / Shelton Store Rd. that broke away from Union Hill Baptist sometime in the early 20th century. Here is found the Pride, Gooden, and other local families' graves. Two separate slave and post-emancipation cemeteries lie on either side of Union Grove Church. At both churches on the opposite side of their roads were built one-room black schoolhouses. Many current landowners are former pupils of these schools. Union Hill School burned to the ground. Union Grove School was moved to the Robert E. Lee Wayside on Rt. 60 east of Buckingham Courthouse. Closed in the 1970s, time-dilapidated Shelton Store for which Rt. 660 is named stands on the north side of 660.

Of the Union Hill district, I include other anecdotes. Dismiss Haskin's great grandfather left with his master to serve him during the Civil War for the Confederacy, and when his master was killed, Dismiss returned his body to his family as requested. Haskins family land is right next to the CS site, which I mentioned when discussing Dominion's recent seizure of additional black heritage land to expand the CS 2 site. Dicey Shelton, whose son opened Shelton Store on Rt. 660, was a slave and her son, Fleming Shelton, told Charles Harper (my principal source) some "awful stories" of what happened to her. She was a member of Union Hill Church.

The Dominion CS 2 and pipeline route application have evoked long-held concerns by African American residents of Buckingham that Black history in the county, aside from the work first done during a WPA cemetery surveying project in the 1930s, and decades later by Lynn and Carl Henshaw of the Buckingham Historical Society to survey slave cemeteries, has been largely "made invisible" in public history. In 1985, Historic Buckingham, Inc, the county's historical society undertook a decades-long project, in their words "to systematically identify all the people buried in the county." Now 4 volumes, *Buckingham Burials*, is the result. The Union Hill District is primarily found in Volume 1, although incomplete. Listed by name, date of birth and death and any inscriptions, only route numbers are given to locate these, which makes them extremely difficult to locate in place.

The herculean mapping work done by Carl and Lynn Henshaw concentrates on siting slave cemeteries. Mrs. Lynn Henshaw's admits this work still requires mapping between 30-50 more entries just to complete her already-identified list. In addition, in oral narratives from residents of Union Hill, there are many family cemeteries and even single slave graves that are known and passed down through generations that have not been recorded or noted for the public record that need to be. In our door-to-door study, we learned of 8 unmarked gravesites of African American ancestors located on their heritage properties or nearby. The Burnley family reports their family's Native American ancestors are buried on the west side of Rt. 56, S. James River Highway.

Based on its shared family plantation history of Bondurants, Moseley's, and Perkins, this district also extends south along Rt. 56 on both northeast and southwest sides. On the northeast side, after Rt. 649, is the site of Variety Shade plantation, which burned in the 1970s, with its two existing cemeteries: one white and one a slave cemetery with 100+ burials. 2 handmade concrete stone markers for "Wm Pride" and "Tom Pride" dated 1906 and 1912 stand amongst rows and

rows of slave burials. There is a standing tobacco barn of large size and once height, now seriously deteriorating, having lost downward at least one story in height.

Charles (Jefferson) Harper, now of Baltimore, whose oral narrative of boyhood in Union Hill led me to the Variety Shade unmarked slave burial site (above) on land still owned by white descendants, Mr. Harper adds understanding to the difficulty of learning through passed-down family stories about slave history. He spoke of these as “passed down by men only” from older to younger male family or by male mentor, as was the case for him. This secrecy he ascribed to their “shaming” elements of slavery carried into later generations, as they often concerned births out of wedlock, some illegal inter-racial births, births from adulterous unions before DNA testing, and so on, with dire consequences for the parents and children involved. Mr. Harper told me that he had not yet spoken of the particulars of his family and slave history to his own children.

His related that his great great grandmother was Betsey Hemmings, daughter of Mary Hemings and Thomas Jefferson, born 1783. Mary was Sally Hemings’ sister. At 14, Betsey Hemmings was among those slaves given to Thomas Jefferson’s younger daughter, Mary known as Maria, at her marriage to John Wayles Eppes. After Maria’s death at 25, Eppes moved to Buckingham County to his plantation, Millbrook. That Betsey was Eppe’s concubine and bore him children is given evidence by her tombstone and grave next to that of Eppe’s own grave, and of equal height and fineness. Mr. Harper says that children borne of that union were given the last name of Jefferson, not Hemings or Hemmings. When Mr. Harper’s mother remarried, he took the surname of his stepfather, Harper, also a freedmen descendent.

Of the white plantation families, we have more written documentation. Dr. John Pierre Bondurant family is first mentioned as arriving from France to Manakin, Virginia (a town entirely formed of Huguenots, formerly a Monacan settlement) onboard a vessel arriving on 1700 (Bondurant Family blog). By Act of the Governor, Huguenot refugees were not only given en toto a huge tract of 19,000 acres in Henrico, but also made exempt from taxes for seven years. The first mention of now John Peter Bondurant (the son) in Buckingham was a land grant signed

by Gov. Thomas Jefferson for 1,125 acres in 1755. In 1997, Gov. James Monroe granted Richard Bondurant 2,113 acres and another parcel 135 acres in now Buckingham. By this time, Bondurants and Moseleys were intermarrying and their inheritors built the various plantation homes, Algoma, Variety Shade, Black Rock, Wheatlands, and Oaklawn.

What we know about Variety Shade plantation whose lands were sold to Dominion for the CS 2: Col. William Moseley (War of 1812) built it in 1798 for his daughter Maria Moseley Bondurant, who lived there until 1825; George Perkins Bondurant inherited it and left it to his son Alexander Joseph Bondurant in 1880. In 1890, when he died, it was left to his heirs and came down to his granddaughter, Emily Wilson; then to her heirs, date unknown, which subsequently formed Variety Shades Landowners, Inc. The plantation house became a boys' camp. It became uninhabited and burnt sometime in the 1960s. When it was a working plantation, Col. Moseley had between 350-400 slaves, who worked many tobacco fields and acres of apple orchards. Slaves worked a sawmill and blacksmith shop, and plantation outbuildings ruins remain including a well-house, smokehouse, salt house, and part of the extensive brick slave quarters. About the latter, Charles Harper (born Jefferson) reported to this author. Mr. Harper grew up on Union Hill Road and hunted regularly in the woodlands of this district.

On the southwest side of Rt. 56 lies the turn onto Rt. 66 W /Wood's Road, where there are wide-open cultivated fields. In the woodlands beyond is the Haskins family cemetery (black). Next on the left/south side of Wood's Road is the Wood's family cemetery (white) followed by the Oba property on the right. On Oba's former Wood's family site, the Texas Schoolhouse has been re-located, for which Rt. 661/Texas Schoolhouse Road is believed named, now used as a sculpture studio. Wood's Corner is characterized by Virginia style two-over-two frame or brick farmhouses with back additions, with large tracts of woodlands. Next historic house on the right of 663 is another Wood's family farmhouse. On the left, Wilderness, built in 1780 by the Welsh immigrant Jones family during the Buckingham Gold Rush. Wilderness still stands, with also historic outbuildings: the Cabell law office, corncrib, and a large white family cemetery, with a Cabell grave the oldest.

Wilderness was built by Joseph Jones, an immigrant from Wales who came during an early phase of the long Virginia "Gold Rush," where gold and copper have been mined since Monacan times, according to John Smith's journal as informed by Powhattan informants. Joseph Jones built Wilderness in 1780. In 1855, William Cabell bought Wilderness and built an adjacent law office. It is said by the current owner, Stephen Ramsey that Cabell brought slaves here from other family plantations nearer the James River, to hide them from the invading Northern Army during the Civil War. The Woods family bought it from Cabell, followed by Mary Carroll Roberts, a Rev. Mathews, from whom Mr. Ramsey purchased it.

This district has always been used for deer hunting, and also bear hunting. In fact, when tromping woods to find the Haskins' family cemetery, we found fresh bear tracks. Now, hunt clubs have taken hunting leases on the open fields and woodlands, and deer season in Buckingham is longer than other counties, which makes it a destination for hunting tourists who come from as far as New York. Buckingham is still largely an agricultural area, but the main crop is no longer tobacco, but timber. There are still market orchards and farms, and home gardens continue to be a key source of fresh vegetables.

Union Hill's role in Buckingham has changed along with most of the county's districts. Once a thriving plantation economy based on slave labor, a site of gold and copper mining, and small businesses including country stores, blacksmiths, home law offices, even midwifery, now such small county enterprise cannot sustain itself. There remain a slate quarry and kyanite mine in Buckingham but not in this district. Woodland forest clear-cutting is probably more important to supplemental income now than the widespread leasing of other landowners' mineral rights to mine for gold, in particular. Captain John Smith mentions the Monacan people as sources of copper to the Pohattan mention that they were "foresters" of these lands, also.

Marc Wagner comments on the Preservation Virginia's PIF

Mr. Dowd's fundamental misunderstanding of both of my emails with Marc Wagner about Union Hill history concern their context. I had worked with Mr. Wagner on a successful application for Yogaville Historic District eligibility. The site tour for that application was one we undertook together, where we could get out of the car – past the windshield screen – to walk around and behind visual obstructions. When Preservation Virginia filed a PIF (Preliminary Inventory Form" on my behalf in February 2017, using the "Union Hill/Woods Corner Historic District" as its name, I had not read it, unfortunately. First, this district is not a "historic district," but either a "rural historic district" or a traditional cultural place –TCP. Buckingham is a "Burnt County" so named for its historic record destruction and also its wood-framed structures torched by fires over time. What is significant about Union Hill is not its structures but its hundreds of years of continuous habitation by the same families and kinship networks. Further, cultural traditions tied to historic black churches here, and family burials both on heritage property and now in specific churches have contributed to these ties that bind.

When I asked Mr. Wagner to send me his comments on Preservation Virginia's draft PIF, he did so but not as declarative statements of fact. Each comment was in the form of a question he had that needed more information from me. When he drove the PIF area, he did so alone. I was not present as with the Yogaville District perambulation to point out what he couldn't see in forested areas. Therefore, remarks about how forests may cover gravesites or other features interpreted by Mr. Dowd as conclusions about lack of historic cultural resource are not new cultural conditions. As noted, the Monacan who lived here were described as "foresters" as well.

Notification of Union Hill's listing as one of Virginia's "Most Endangered Historic Places" on May 3, 2016, and its complex of historic resources, marked and unmarked slave burials, churches, cemeteries, former plantation sites, farm structures, homes, photographs, and slave plantation neighborhood history have been part of the public record of comments made to the Buckingham Planning Commission, the Buckingham Board of Supervisors, to FERC, by Lakshmi Fjord, Justin Sarafin and Sonja Ingram of Preservation Virginia since August 2016.

It is hard to understand why Mr. Dowd thinks to invalidate Union Hill's history and its significance.

Conclusion

There is a growing fear expressed by Virginia historians that the last remaining vestige of slave plantation history are becoming fewer to study because of development, such as the proposed ACP pipeline and compressor station. Better inclusion of Buckingham's African American

history in the record of Virginia's slave and post-emancipation history would bring recognition to Union Hill as a nearly unique place where descendants of former slaves still live in close proximity to the descendants of those who enslaved them. Loss of this site would be a profound loss to U.S. history indeed. Finely grained identification processes of the cultural resources dating from Native American, colonial settlement, plantation and post-emancipation histories, would fill an almost total gap in public knowledge about this district's place in each of these.

African American landowners in Union Hill describe a pattern of marginalization of Buckingham's slave and post-emancipation Black history within both Buckingham's and Virginia's "public history" to explain why Dominion Power was able to locate the CS in their midst without strong political pushback or other residents' outcry, as occurred in other ACP-impacted Virginia counties. As such, this district's history is very much at the heart of larger concerns among preservation historians and African Americans about "missing" or "invisible" slave history "on the ground" where it was lived.

For an example, African American residents cite the case of Carter G. Woodson, born of freed slaves in 1875 in New Canton, Buckingham County, who became known as the "father of Black History." Yet, in the county of his birth, African American residents decided to create a separate Buckingham Afro-American Historical Society because the predominantly White Buckingham Historical Society was not interested in erecting a memorial to him and his work in the county. This group is reformulating around the threat to Black history in Union Hill posed by the CS site in its midst.

"Such discussions of the history of race in America have never been more relevant or their potential erasure from the landscape more egregious and troubling," notes Justin Sarafin, Preservation Virginia's Director of Preservation Initiatives and Engagement, in his testimony at the Cville People's Tribunal on the Human Rights and Environmental Justice Impacts of the ACP and MPV, (Oct. 28, 2017, All Testimonies, 75)

Understanding the gravity to Virginia and U.S. history of imminent loss of unmarked slave burials because of development, Virginia's legislature passed Del. Delores L. McQuinn's bills to give equal state recognition of historic African-American cemeteries and better preserve and tell the history of African-Americans in Virginia. The bills, approved in uncontested 97-0 votes are accompanied by \$150,000, which the House Appropriations Committee proposed to identify and preserve historic African-American sites and artifacts.⁹

Mr. Harper called me recently to say that he had returned to Union Hill for a family burial and learned about the excitement around the Variety Shade slave burials. He was very concerned because this was not the location of hundreds of slave burials he had tried to describe to me. He referred to them as near the old Hall Plantation, which is on the west side of the proposed compressor station site. With the aid of a team of volunteers, we hope to use LiDAR to locate this site.

Now, John and Ruby Laury and Richard Walker of the Harper family are completely engaged in

⁹ Del. McQuinn unanimously passed bills to preserve African American cemeteries and slave burial sites in Virginia https://www.richmond.com/news/virginia/government-politics/house-approves-mcquinn-bills-on-slave-history-african-american-cemeteries/article_78b477f0-3e58-5d6c-a732-e0748af8f05a.html

uncovering their family histories on the ground and UVa Special Collections where slave plantation family boxes already have offered first glimpses of slave names and where they lived. Here on ACP's Phase 1, Architectural Survey (for Buckingham County Compressor station APE): May 2017, P.4; we find 014-5091 – which is the Harper family homeplace noted in purple here:

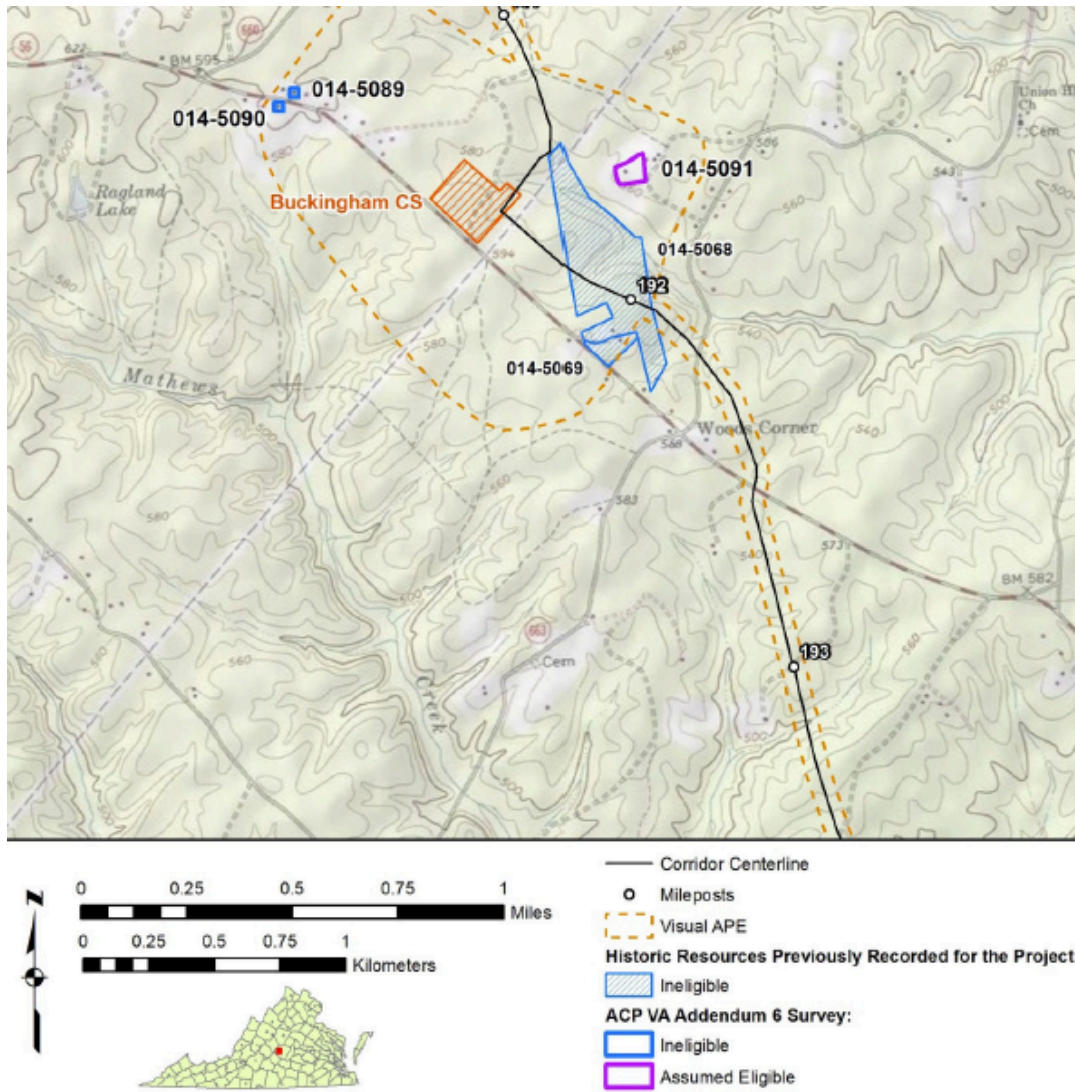

Figure 2. Historic resources identified within the visual APE of the proposed Project component.

At this Harper homeplace are reported unmarked graves of Betty Harper, Josephine Hurt, and Mary Haley. In our Community Study, we learn of 8 more grave-sites on Union Hill property or nearby. I have been contacted by Betsy Merritt of the National Trust for Historic Preservation who will be working with me to create a collaborative community study to explore the best designation to fit Union Hill's black history, where built structures do not exist, yet history abounds.

Respectfully submitted,
Lakshmi Fjord

Dear Chairman Langford and members of the Virginia Air Pollution Control Board,

We are submitting this petition as part of the new public comment period on Dominion Energy's request for an air permit to build the Atlantic Coast Pipeline compressor station in Buckingham County, Virginia.

We submit this petition on behalf of Friends of Buckingham, Appalachian Voices, Chesapeake Climate Action Network and all the individuals that signed the document. Over 3,200 signatories to date.

Thank you for your time and consideration,

--

Friends of Buckingham

Recipient: VA Air Pollution Control Board, Governor Ralph Northam, Secretary Matt Strickler, Attorney General Mark Herring, DEQ Director David Paylor

Letter: Greetings,

John Laury traces his roots in rural Virginia back over 150 years when his forebears and other freed slaves established the small community of Union Hill.

Today, he and his wife, Ruby, and their neighbors are fighting for their lives – trying to protect their land, health and heritage. As part of its proposed Atlantic Coast Pipeline (ACP) project, Dominion Energy, one of the largest monopoly utilities in the U.S. and the largest corporate donor in Virginia political campaigns, is trying to build a massive, polluting fracked-gas compressor station in the heart of this historic African-American community. Dominion and state officials are trying to erase the environmental injustice impacts of their site choice through misinformation.

It's a classic example of environmental racism, and it must stop!

Dozens of environmental justice and climate leaders from across the U.S. have signed a letter of support for Union Hill, including Karenna Gore, Dr. Robert Bullard, Bill McKibben, Rev. William Barber, Mustafa Santiago Ali, Tim Guinee, Chelsea Handler and many others. Support is growing every day through #WeAreAllUnionHill.

Sign this petition to the Virginia Air Pollution Control Board by 5 pm, January 4, 2019, urging the board to deny the permit for the proposed fracked-gas compressor station. Here's why:

The Virginia Department of Environmental Quality (DEQ) and Dominion only used average census tract data, which erased clusters of minority residents who are most impacted by the project, and claimed 600% fewer people live in Union Hill than were found in a 2-year, door-to-door anthropological study by a University of Virginia researcher. That study found the community to be roughly 83% non-white. The DEQ also denied the research done on the historic freedmen populations at this former plantation site. The agency's

methods are exactly what the National Environmental Policy Act was meant to stop -- systemic racism in the siting of polluting facilities.

The compressor station would operate 24/7, emitting toxic pollutants while generating near constant noise and light pollution in this rural community, disproportionately impacting the health of nearby residents. It would also emit smog, benzene, formaldehyde, and other harmful pollutants. Facilities like the proposed compressor station have been linked to severe respiratory problems and cancer.

Methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would create even more greenhouse gas emissions and commit the state to another generation of fossil fuel dependence, even while renewable sources of energy continue to become more and more efficient and affordable compared to gas. The ACP, and the Buckingham compressor station, are inconsistent with Virginia's sustainability goals and would undercut current and planned measures to mitigate greenhouse gas emissions.

DEQ refuses to do a community health assessment before the facility is built, saying it would do so only after two years of operation. This is unacceptable — it's like asking a person to smoke for two years and then assessing whether they were harmed.

The air board must consider both the future of Virginia and its past legacy of slavery when making the decision to deny the air permit for this compressor station.

Our nonprofit organization, Friends of Buckingham, and many others have vigorously refuted Dominion's and the DEQ's erroneous claims that Union Hill is not an environmental justice community and that the residents would not be harmed. Allowing this permit to stand would continue this pattern of environmental racism and turn a blind, uncaring eye on innocent Virginians and their descendants forced to bear a disproportionately higher risk to physical and mental health and well-being, economic stability, and human rights, all to benefit a for-profit corporation, not the public.

Stop the air compressor station in Union Hill

Laura Hoxworth <laura.hoxworth@gmail.com>
To: airdivision1@deq.virginia.gov

Fri, Jan 4, 2019 at 8:46 AM

I am a Charlottesville resident writing to oppose the construction of Dominion's air compressor in Union Hill for these reasons:

- * The DEQ did not do a proper site suitability analysis. This failure violates state law and requires rejection of the draft permit.
- * The ACP Buckingham Compressor Station Environmental Justice Review, dated November 28, 2018, uses invalid census data to characterize the affected population and dependence on that analysis would be arbitrary and capricious.
- * The only valid assessment of environmental justice factors in the legal record is the Union Hill Community Household Study Site and Methods Report. If the Board fails to properly respect this information, its action will be invalid.

The air board must consider both the future of Virginia and its past legacy of slavery when making the decision to deny the air permit for this compressor station.

Laura Hoxworth

public comment, request to deny permit: ACP compressor station at Union Hill

Fri, Jan 4, 2019 at 11:14 AM

Members of the Virginia State Air Pollution Control Board,

I am writing as a citizen of the Commonwealth of Virginia to respectfully register my opposition to the permitting of the Atlantic Coast Pipeline compressor station in the community of Union Hill, Buckingham County. I believe that the only decision to comport with your solemn obligation to the people of Virginia is to deny this permit on the basis that it rests on inadequate, false, and misleading information and that the applicant has thereby evaded more rigorous evaluation under environmental justice provisions of the National Environmental Policy Act .

The record clearly shows that the Federal Energy Regulatory Commission and Virginia's Department of Environmental Quality chose to rely solely on population and demographic data provided by the applicant that effectively erases the people of Union Hill who would be most harmed by this compressor station. This 2010 Census data and screening process are known to be a blunt instrument and the result is not just an imprecise profile of the impacted community but an entirely inaccurate and misleading one. You the board have access to an on the ground, door to door Union Hill Study and an thorough explanation of its methodology that contradicts and discredits the applicant's claims.

The Board cannot make a sound, credible decision based on faulty information. This process has already been tainted by egregious meddling in the composition of the Board followed by a truncated public comment period held over the holiday season. We need our faith restored that this process is not a matter of "going through the motions" to give a democratic gloss to a foregone conclusion that sells out our people and our environment to a for-profit corporation.

Dominion Energy has used means to erase the people of Union Hill to serve their own ends. Federal and state agencies have abetted them. We are relying on you, appointed to independently serve the citizens of Virginia, to see, count, and value the people of Union Hill with fairness and justice.

Sincerely,

Laura Kitchin Greenleaf

PM

To: airdivision1@deq.virginia.gov

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Sincerely,

Louisa Bradford

Buckingham Compressor Station

Lee, Karen Ryder - leekr <Leekr@jmu.edu>

Fri, Jan 4, 2019 at 12:14 PM

To: "airdivision1@deq.virginia.gov" <airdivision1@deq.virginia.gov>

Dear members of the APC board,

I respectfully ask that you deny the permit for the proposed Buckingham Compressor Station.

Among my concerns are:

DEQ did not do a proper site suitability analysis, as explained in the [letter from the Southern Environmental Law Center \(SELC\)](#) dated

December 7, 2018. This failure violates state law and requires rejection of the draft permit.

The [ACP Buckingham Compressor Station Environmental Justice Review](#), dated

November 28, 2018, uses invalid census data to characterize the affected population and dependence on that analysis would be arbitrary and capricious.

The only valid assessment of environmental justice factors in the legal record is the [Union Hill Community Household Study Site and Methods Report](#). I ask that the Board use this information.

Thank you all for your hard work to care for our environment, health and justice on behalf of Virginia families.

Sincerely,
Karen Ryder Lee

To whom it may concern.

I oppose the compressor station at Union Hill. Allowing this permit to stand would continue a pattern of environmental racism and turn a blind, uncaring eye on innocent Virginians and their descendants forced to bear a disproportionately higher risk to physical and mental health and well-being, economic stability, and human rights, all to benefit a for-profit corporation, not the public.

Sincerely,

Leslie Lytle

Re: Buckingham Compressor Station

From one human to another human,

In a time of “alternative facts” it’s important to remember historical facts that are above partisan interpretation - Buckingham county came into existence as an enterprise dedicated to plantations that were worked by enslaved African Americans. There can also be no doubt that our nation is still wrestling with racial issues today. Your decision on the Buckingham Compressor Station is not being made in a moral vacuum. True, the legal maneuvering and procedural shell games may give the superficial appearance that you are voting on a rather technical issue, but the fact remains – you are deciding the fate of a people that have been profoundly wronged by state agencies in the past. Like it or not, this is more than a process for considering an air permit, this is a moral issue. And although the rules of order bypass ethics

and morals, you as a human simply must include your morals when considering this proposal.

In the process of making your decision, do you feel you're informed or misinformed? Have you considered the sources that have submitted the studies you are reviewing? Regardless of the citations, references, veracity, and eloquence, is the information true? Your family physician faces similar decisions when reviewing studies in the *Journal of the American Medical Association*. Because of the aggressive nature of corporations in the pharmaceutical industry, the American Medical Association, fearing their journal was being "used" for marketing, took the unusual step of declaring that, in their opinion, there are now two kinds of science: industry funded and non-industry funded and advised physicians to exercise caution when reading industry funded "research." Any research scientist can provide numerous examples of how a study can be manipulated to produce findings sympathetic to the funding source.

What's the rush? If the proposed compressor station is truly needed and must simply be placed in Buckingham county then the individuals confident in this proposition shouldn't have a problem with a delay. Look beyond the short-term deadlines that have been placed before you. Practice a simple thought experiment practiced by the Iroquois elders – is your decision today in the best interest of those coming seven generations in the future? Will they benefit or will they suffer from the decision you make today? There is wisdom in resetting the clock to not only gather more information but to thoroughly examine the validity of information that has been placed before the board from industry-funded studies.

Include these two things in your calculation: a people that have been wronged by the Virginia government and a well-funded campaign of misinformation predicated on rapidly moving this initiative forward. Vote no. Vote to give future generations the time and space to make their own decisions about clean air, clean water and sustainable energy that is appropriate for their needs.

There's one fact that rises above "alternative" facts upon which you will be judged on in the future (here on earth as well as perhaps in a more spiritual realm) - the African-American people of this community have suffered mightily at the decisions from government agencies in the past. Don't let this chapter of Virginia's history repeat itself!

Sincerely,

Joseph Murray

Dear Virginia Air Pollution Control Board,

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station. Further, FERC has not yet authorized work to begin in Virginia on the ACP, and the project's future is even more questionable due to its permits being vacated by the courts. Without the necessary authorization to build the ACP, there is no need for the compressor station.

In responding to major concerns about the project causing greenhouse gas emissions and contributing to climate change, DEQ simply stated natural gas is more efficient compared to coal and oil. Their response ignores that methane and carbon dioxide emissions from the compressor station alone would cancel out one third of Virginia's proposed carbon reduction regulations aimed at mitigating climate change. The ACP served by the compressor station would even further exacerbate expected greenhouse gas emissions and commit the state to another generation of fossil fuel dependence. This is inconsistent with Virginia's sustainability goals.

The siting of the compressor station in the Union Hill community reflects an undeniable pattern of siting dangerous, polluting industrial facilities in poor communities of color across our nation; a pattern Virginia must break. Allowing this permit to stand would continue this pattern of environmental injustice.

The Board has the power to reject projects that would threaten human health and the environment. The draft air permit remains woefully inadequate to protect health, and I respectfully request that the Board deny it.

Sincerely,

Linda Hansell

Re: Proposed ACP compressor station at Union Hill

January 4, 2019

In August, the Governor's Advisory Council on Environmental Justice called for a moratorium on the Atlantic Coast Pipeline until investigations of serious and credible environmental justice issues can be made. Those investigations have not been made. Until a report is issued, consideration of the compressor station in the community of Union Hill in Buckingham County should not be on your agenda.

One form of environmental discrimination is the placement of a facility in a location where the people living there will be harmed, but do not have the means to fight back. This is certainly the case in Union Hill. Many of the people in this community are the descendants of slaves who worked the very plantation land where the compressor station is now proposed.

Jim Crow Laws were a collection of state and local statutes that legalized racial segregation in the South after the Civil War. The laws remained in force until the 1960s, strongly opposed by Civil Rights movements. One Jim Crow act that stands out in American history as a glaring example of racial prejudice took place in the county that lies along the southern border of Buckingham County. Rather than integrate the public school system, Prince Edward County closed all of its public schools from 1959 to 1964. Today, the former Moton High School in Prince Edward County is a National Historic Landmark and Museum, representing the fight for equality in education.

People in the Union Hill community in Buckingham managed to hang on to their land through the Jim Crow era. However, now - some 50+ years later – a large corporation is asking for your permission to destroy the fabric of this community. At risk is the health and morale of people in the community. Clean air, clean water, and the absence of light and noise pollution could be lost.

Environmental justice includes recognition of community ways of life, local knowledge, and culture, and it ensures the capability of communities and individuals to function and flourish. I have serious doubt that anyone serving on the Air Board would remain quiet and submissive were this compressor station to be proposed for YOUR neighborhood.

In the larger picture, the entire ACP is a flawed project that will exacerbate climate change by tying Virginia to increased use of fossil fuels, lead to higher electricity rates for captive customers, destroy forests and streams, and degrade the Chesapeake Bay. Quite frankly, I don't see any benefits at all. Even the Dominion executives and shareholders who

To: airdivision1@deq.virginia.gov

Cc: DEQPublicInfo@deq.virginia.gov

I am writing this comment to ask the Air Board to deny the Buckingham Compressor Station air permit. The Department of Environmental Quality based their approval for the air permit based on improper analysis which resulted in false data.

Improper census data regarding the impacted population of community members was used in the Atlantic Coast Pipeline's November 2018 [Buckingham Compressor Station Environmental Justice Review](#). There has only been one valid assessment of the impacted population which is on legal record. This assessment which was completed by Dr. Lakshmi Fjord is the [Union Hill Community Household Study Site and Methods Report](#). The decision to approve the air permit cannot be considered valid if it is based on the ACP's Environmental Justice Review.

In addition, the Department of Environmental Quality did not perform a proper site suitability analysis which is required by law. This is detailed in the December 7 2018 [letter from the Southern Environmental Law Center](#). This failure by the DEQ to perform a proper site suitability analysis breaks the law and provides another reason why the permit should be denied.

The Air Board must act now on the facts and deny the Buckingham Compressor Station air permit.

Sincerely,

Shane Lovelace

Dear Virginia Air Pollution Control Board,

Do the right thing and DENY the permit!

I write to request that you deny the draft New Source Review air pollution permit for applicant Dominion Energy's proposed Buckingham Compressor Station for the Atlantic Coast Pipeline.

In analysis of the permit, DEQ stated the proposed site for the compressor station is "sparsely populated." Research done by community groups indicates this is not true, with over 200 Virginians living within a mile of the site. In response to expert testimony regarding Union Hill's status as an environmental justice community, DEQ dismissed concerns, using a source with less than reliable methodology to inaccurately conclude Union Hill is not an environmental justice community. Responding to a community study designed using protocol set by the National Institutes of Health showing a high prevalence of elderly, low-income and African American residents in Union Hill, DEQ continued to rely on census data that aggregated too large of an area, hiding the true density of the area. Without further analysis or discussion, DEQ cannot determine Union Hill is not an environmental justice community.

Furthermore, the health assessment is inadequate. DEQ has proposed a retrospective study to determine if there have been unhealthy levels of emissions, two years after the compressor station is in operation. This is unacceptable, equivalent to asking a person to smoke for two years and then assessing whether they were harmed. While indicating at the Board's 12/19 meeting intent to ask the Department of Health to conduct a study, DEQ has made no written assurances that the assessment will be conducted at all. Before the permit is granted, a comprehensive health assessment must be done.

Before and during the Air Board's meeting in November 2018, independent expert testimony pointed to a lack of need for the ACP, and therefore the compressor station, and the Board expressed concern over the necessity of the project. In response, DEQ repeated a quote from FERC's FEIS which stated that not allowing the ACP to be built "could" lead to issues meeting demand for natural gas. DEQ fails to address mounting evidence that more gas is not truly needed: declining gas prices; stagnant demand forecasts over the next decade; Dominion's abandonment of plans for new gas-fired power plants in service areas. DEQ and Dominion have failed to consider these facts and have not shown a need for the ACP or the compressor station.
